

Infor Velocity Suite for automotive

Your path to becoming an
agentic enterprise

The agentic enterprise

The market shift to agentic artificial intelligence (AI) is already underway. Automotive manufacturers that move now will outpace those that wait. An agentic enterprise is one where AI agents and humans work as one. **Industry-specific agents execute tasks, orchestrate workflows, and make decisions across the business, under human oversight.** Built to execute, not just advise.

Infor™ Velocity Suite is the catalyst that accelerates your journey to becoming an agentic enterprise. It brings together out-of-the-box industry AI agents, guided adoption, continuous co-innovation, and a predictable cost model in a single package—built on the same industry data model that powers your Infor CloudSuite™ Automotive.

The four elements of your agentic enterprise

1 Precise industry agents Pre-trained on your industry's data, workflows, and compliance rules. Deliver value from day one without months of setup.	2 Adaptive experiences Role-based workspaces and generative AI (GenAI) assistants that keep teams focused on high-priority work while agents handle the routine tasks.	3 Autonomous orchestration End-to-end workflows across systems with fewer manual handoffs. Processes run consistently and efficiently.	4 Governed velocity Every human and AI action is auditable, traceable, and compliant by default.
--	---	---	---

Infor Velocity Suite: The catalyst

No other vendor combines industry AI agents, process mining, automation, prebuilt use cases, and implementation support in a single package at a flat fee. Infor Velocity Suite helps you move faster toward becoming an agentic enterprise, starting wherever you are today.

Out-of-the-box industry agents Pre-trained on your industry's data model. No configuration required. Value from day one.	Guided path to proven AI value A prescriptive roadmap from wherever you are today: on-premises, mid-migration, or underutilizing the cloud.	Continuous co-innovation Forward-deployed engineers work alongside your team. When a use case is not in the catalog, we help build it with you.	Predictable total cost of ownership (TCO) Flat fee, unlimited use cases. One package: AI agents, process mining, automation, and implementation support.

Automotive: AI where it counts

Infor Industry AI Agents are built on the same data model that runs your operations. A supply chain agent in automotive understands original equipment manufacturer (OEM) release schedules, supplier lead times, and bill of materials (BOM) variance, because that expertise is already built into the product. Here is what that means across your biggest challenges:

CHALLENGE	IN THE AGENTIC ENTERPRISE
Profitability and growth	AI agents watch the numbers that your team cannot monitor manually. Flagging margin pressure and cost variance in real time, so leadership acts on insight, not in hindsight.
Demand volatility and OEM schedule changes	AI-forecasting with native OEM or supplier electronic data interchange (EDI) automatically handles last-minute schedule shifts, keeping just-in-time (JIT) delivery on track without manual replanning.
Supply chain responsiveness and resilience	Automated alerts and AI-driven demand signals enable your team to act on disruptions before they impact the line with full end-to-end supplier visibility.
Quality, scrap, and defect reduction	AI-enabled monitoring of tolerances, nonconformance, and scrap across production runs in real time, triggering corrective actions before defects arise and surfacing root causes.
Regulatory and trade compliance	Compliance agents continuously monitor BOM changes and automatically trigger the production part approval process (PPAP) resubmissions when any supplier process or material change.
Workforce productivity and knowledge retention	Role-based AI agents surface the next action for each person—whether on the floor, in procurement, or in finance—so institutional knowledge stays in the system even as people change.

How we work together

Going through a technology transformation can be difficult. Many vendors would step away as problems arise. But Infor stays with you—before, during, and long after your new system goes live.

Doing the work together

Infor's forward-deployed engineers work alongside your team throughout implementation and beyond, not handing off a system and walking away.

Solutions made for you

When the use case you need is not in the catalog, our engineers help build it with you. Your business shapes the outcome, not through a generic template.

The art of the possible

We stay engaged after go-live. Every innovation feeds the next. Co-innovation is a continuous cycle of discovery, development, measurement, and expansion.

Proven customer results

Miller Industries

Miller Industries automated its parts order creation with Infor Velocity Suite, saving 3,000+ hours annually and processing rush orders 98% faster—freeing teams to focus on higher-value work.

8 out of the top 10

Automotive manufacturers globally run on Infor. Trusted across OEMs, tier suppliers, and specialty vehicle manufacturers in 74 countries.

Infor Velocity Suite provides automotive manufacturers with a practical path to becoming an agentic enterprise, with the systems, data, and teams already in place. Through industry AI agents, guided adoption, continuous co-innovation, and predictable cost control, Infor helps you move from AI ambitions to measurable business impact faster. Gain the confidence to scale across operations, supply chain, finance, and the factory floor.

About Infor

Infor is a global leader in business cloud software products for companies in industry-specific markets. Infor builds complete industry suites in the cloud and efficiently deploys technology that puts the user experience first, leverages data science, and integrates easily into existing systems. Over 67,000 organizations worldwide rely on Infor to help overcome market disruptions and achieve business-wide digital transformation.
