Infor CloudSuites built on Amazon Web Services

A unique combination

Building on over a decade of partnership, Infor™ and Amazon Web Services® (AWS®) are redefining enterprise cloud solutions by integrating advanced artificial intelligence (AI) technologies such as generative AI and agentic AI. This collaboration enables organizations to unlock new operational efficiencies, agility, and industry-specific innovation—powering smart manufacturing and beyond.

The unique power of the Infor Cloudsuites, built on AWS, doesn't just come from what's inside; it comes from the distinct approach we use to build our business software, then assemble and fine-tune our performance-enhancing capabilities to help you increase agility and improve your business. Infor's innovative cloud technologies, built to work hand in hand with the world-class capabilities of AWS, can give your organization the power and responsiveness needed to stay ahead in an increasingly competitive environment.

The secret ingredient for business agility

Achieving industry success requires more than just servers and software; it takes a unique combination of technologies, services, and subject-matter experts. Infor CloudSuites, natively built on AWS, offers just that: cloud infrastructure, network services, and industry experts—so you get the reliability, security, scalability, and personal support you need to confidently run your business in the cloud.

Get the reliability, security, scalability, and personal support you need to confidently run your business in the cloud.

A new recipe for success in the cloud

Infor has been delivering cloud-based enterprise solutions for more than 10 years, and our business software has been powering many of the world's largest and most successful companies for more than 30 years. These experiences have helped us perfect the technologies and core web services necessary to deliver the performance, security, and breadth that enterprise customers need.

Superior ingredients

Industry transformation with AI: Infor and AWS work together to deliver AI-powered innovation that meets the specific needs of industries and micro-verticals. Customers can now benefit from agentic AI to automate complex workflows, improve supply chain resilience, and accelerate smart factory initiatives.

Collaborative innovation: Infor and AWS's joint teams of experts continuously co-develop solutions that harness the latest AI advancements, ensuring customers get early access to cutting-edge technology tailored to their industries.

Rapid scalability: Infor CloudSuite™ solutions can easily adjust to changes in processing volume as your business demands fluctuate, thanks to Elastic Load Balancing that automatically covers shifting capacity requirements. This is especially important in businesses that need to respond to highly variable levels of demand, such as seasonal sales or annual events.

High availability: All Infor products can be deployed across multiple AWS Availability Zones (AZs) to optimize fault tolerance and reduce any risk of downtime. We've built everything to minimize single points of failure, so whether you're a global manufacturer that runs 24x7 or a healthcare provider, you won't have to worry about downtime.

Great flexibility: Infor can now deploy mission-critical enterprise applications with a wide variety of server configurations and varying utilization, thanks to the exceptional flexibility of the Amazon Elastic Compute Cloud (Amazon EC2). Amazon EC2 readily replaces vast amounts of physical server hardware you would otherwise have to purchase and deploy, giving you unmatched reliability and availability at no additional cost.

The formula for new opportunity

We've chosen to work with AWS because it offers unmatched strength and sophistication in delivering cloud infrastructure. With AWS, Infor is able to provide an innovative technology framework with capabilities that support the enterprise, including federated services to permit single sign-on across the organization, automated logging and monitoring, and a full range of industry-grade cloud infrastructure elements. AWS perfectly complements Infor's industry-specific solutions and together we provide customers with superior delivery models, competitive cost structure, and proven record of operational excellence.

Improved results

AI-driven insights and automation: Leveraging Amazon SageMaker and Amazon Bedrock as the foundation for Infor Industry AI, customers gain predictive, prescriptive, and generative AI insights that drive better decision-making, automate routine tasks, and improve productivity while reducing costs.

Superior auditing and compliance: For many of the industries that we serve, compliance and audit needs are critical requirements. Infor supports compliance at the application level, while AWS maintains high compliance standards for the underlying infrastructure—giving Infor CloudSuite customers an important advantage in meeting detailed industry standards such as ITAR and HIPAA.

Quick disaster recovery: Infor CloudSuite solutions help ensure business continuity in the face of the most challenging disaster recovery scenarios. Our solutions can be distributed globally across AWS data centers, and AWS offers sophisticated global failover capabilities. This combination gives you rapid redeployment of both applications and data in response to nearly any imaginable service disruption around the globe.

The Infor + AWS partnership is powered by people and innovation. Together, we invest strategically in AI, cloud modernization, and customer success—delivering industry-specific solutions at scale and speed across 10 AWS regions and 27 availability zones worldwide.

About Infor

Infor is a global leader in business cloud software products for companies in industry-specific markets. Infor builds complete industry suites in the cloud and efficiently deploys technology that puts the user experience first, leverages data science, and integrates easily into existing systems. Over 67,000 organizations worldwide rely on Infor to help overcome market disruptions and achieve business-wide digital transformation.
