rochure Infor WM:

Architected for agility, usability, and results

Customers have heightened expectations around service and value. No longer do trade-offs between availability, cost, and speed suffice; businesses need to deliver all three. Market dynamics, evolving product portfolios, growing complexity, and a changing labor force challenge companies to leverage automation and better utilize assets to fuel profitable growth. Infor's flagship warehouse management system (WMS), Infor® WMS, enables agile fulfillment.

It combines advanced warehousing capabilities with highly configurable rules, built-in labor, task, inventory management, and 3D visualization in a single intuitive solution. The unified approach lets businesses holistically assess requirements, incorporate value-added services, prioritize tasks, and eliminate bottlenecks. In this way, Infor enables perfect order fulfillment while improving throughput and costs. Available in the cloud on a true SaaS Architecture or on-premise.

"With Infor WMS, we gained realtime visibility of our numerous warehouse stockpiles. This enabled us to reduce our customer's inventory management costs and provide customers with a better logistics service experience —which contributed to our acquisition of a significant number of new clients."

- GOH WEE YAW, CHIEF OPERATING OFFICER, GLOBAL AIRFREIGHT INTERNATIONAL PTE LTD. "With our prior system, it took a significant amount of time for people to get up to speed. Now, with Infor WMS we can have a new person come on line and, within 10 days, be operational and productive, and that is huge for us."

- LAURA SCHULTZ
DIRECTOR OF IT & PMO, JOHNSTONE SUPPLY, INC.

Tools for a Modern Warehouse

Warehouse operations have undergone significant changes, from managing diverse facility networks to coordinating B2B and B2C operations and adapting to constant change. Traditional legacy systems are unable to keep up with these dynamic demands.

The design of Infor WMS prioritizes configurability and intuitive use as fundamental elements. Advanced features target better inventory, space, labor, and equipment utilization. These include multi-sequenced put-away, cross-docking, kitting, 3D visualization of the warehouse, and integration to material handling automation.

Comprehensive functionality includes:

Receiving & Put-Away

Supports appointment dock door scheduling, QC inspections, directed put-away, cross-docking, flowthrough, RF and or Voice processing, mixed pallet, and rainbow pallet operations.

Inventory Management

Supports multi-site and multi-owner inventory control and visibility. Reduces obsolescence with configurable rotation rules, capture attributes, and LPN-controlled tracking. Tracks inventory in real time down to bin location level. Provides system and manually driven cycle counting and full physical inventory take.

Wave Management

Supports the creation and scheduling of waves with filters such as product category, number of lines, overall weight, and final destinations. Supports the creation of waves for B2B, B2C, and 3PL from the same warehouse and inventory locations.

Picking & Replenishment

Supports dynamic replenishment as well as best practice picking methods such as order, cluster, wave, and batch picking with RF and voice processing.

Labor Management

Create or import labor standards that utilize elements, conditions, travel distance, and allowances to generate engineered labor standards. Compare actual task time to standard time to identify good and bad performance at the individual and team level.

3D Visual Warehouse

Visualize DC activity using an embedded, interactive interface. As a virtual decision hub, Infor WMS lets users 'see' workflow, bottlenecks, and at-risk inventory, and then seamlessly initiate corrective action to alleviate delays and increase productivity.

Value-Added Services

Accommodate personalized service requirements, from kitting, bundling, and light assembly, to compliance labeling and special packs. Drive competitive differentiation by integrating customer-specific configuration and tailored delivery.

3PL Billing

Infor WMS embeds an industry-leading activity-based solution with customer-level costing, billing, and invoicing. Incorporate account-specific workflows, traceability, and services critical to supporting multi-warehouse and multi-owner operations.

Adaptive WMS for operations at the speed of business

Infor's advanced warehousing functionality is designed to meet the needs of your business today, while supporting tomorrow's growth.

With industry-specific capabilities to increase customer service and product velocity, Infor WMS is available in 14 languages and has been implemented around the globe. It utilizes an object- oriented distribution platform for independence, reliability, scalability, and security. It can be deployed either in the cloud or on-premises.

Infor brings 30 years of experience to the WMS space. With over 5,000 installations in 40 countries, Infor successfully supports a wide range of companies—in terms of size, source of complexity, industry, and ERP instances. Contact us to explore the next generation in warehouse management.

Infor WMS users have reported achieving:

▼ 15 to 20%

reduction in fulfillment costs

▲ 5 to 12%

improvement in inventory throughput

▲ 15 to 40%

increase in labor productivity

▲ 5 to 25%

savings in transportation costs

▼ 5 to 20%

decrease in space requirements

Bin inventory accuracy over 99%

About Infor

Infor is a global leader in business cloud software products for companies in industry-specific markets. Infor builds complete industry suites in the cloud and efficiently deploys technology that puts the user experience first, leverages data science, and integrates easily into existing systems. Over 67,000 organizations worldwide rely on Infor to help overcome market disruptions and achieve business-wide digital transformation.
