

Infor Data Services

Go live with clean, trusted data from day one, and prepare your business for the agentic enterprise

Get more from your data, and your Infor investment

Data-driven organizations experience over 30% annual growth,¹ yet poor data quality continues to create material cost, risk, and execution challenges. A successful cloud enterprise resource planning (ERP) implementation depends on cleansing, reconciling, and standardizing data scattered across multiple ERPs, legacy systems, and business units.

Infor™ Data Services takes end-to-end ownership of your data across the cloud transformation journey, spanning both Infor and non-Infor source systems. Powered by the Infor Master Data Management platform, our teams extract, profile, cleanse, master, and migrate your data through go-live, with a full audit trail at every step. The outcome is clean, consolidated, and migration-ready data. This provides a foundation for ongoing governance—enabling analytics, artificial intelligence (AI), and better decisions well beyond go-live.

Poor data quality costs the average organization \$12.9 million US each year.²

Turn fragmented data into an asset that grows with your business

A successful cloud migration starts with the data. A clean, trusted foundation makes the entire implementation more predictable and keeps paying off long after go-live.

Reduce risk and accelerate time to value

Cleanse, master, and migrate data before go-live to keep timelines on track and minimize disruption

Control project cost and complexity

Standardize and harmonize data across business units, regions, and systems to cut duplicated effort and lower operating costs

Fuel analytics, AI, and better decisions

Deliver curated, governed data to the people and tools that need it, accelerating reporting and preparing the organization for AI

Our proven six-step methodology

- 1 Extraction:** Ingest data from legacy systems (ERP, customer relationship management (CRM), product lifecycle management (PLM)), and others for analysis and transformation
- 2 Profiling:** Assess data completeness, consistency, uniqueness, and accuracy, with initial source-to-target mapping
- 3 Cleansing:** Automatically correct or remove incorrect, corrupted, and incomplete data—domain by domain
- 4 Mastering:** Automatically remove duplicates and harmonize data into a single, consolidated golden record
- 5 Migration:** Manage source-to-target mapping, iterative loading, testing, and remediation through go-live, with a full audit log
- 6 Governance:** Define enterprise-wide rules, workflows, and approvals to manage creation and maintenance of master data

See your data clearly with Infor Data Discovery

Get started with a fixed-scope assessment lasting two to four weeks.

- ✓ Data quality profile
- ✓ Source-to target field mapping
- ✓ Cleansing and mastering recommendations
- ✓ Recommended scope and next steps

Why Infor Data Services

Migrating and mastering enterprise data is hard to do well. Infor brings the expertise, method, and tooling to get it right the first time.

Deep Infor expertise

A specialized team that knows your product and industry

A proven, data-first approach

A repeatable methodology that prepares your data for go-live and successful operations

A unified data platform

A single, trusted view of your data across all systems, applications, and domains

About Infor

Infor is a global leader in business cloud software products for companies in industry-specific markets. Infor builds complete industry suites in the cloud and efficiently deploys technology that puts the user experience first, leverages data science, and integrates easily into existing systems. Over 67,000 organizations worldwide rely on Infor to help overcome market disruptions and achieve business-wide digital transformation.
