Clinical Bridge

HEALTHCARE

Infor® Clinical Bridge overcomes the clinical and data gap by quickly connecting clinical systems, such as Epic© or Cerner© EHRs to supply chain, point of use, and finance, unlocking the value in those systems

Infor Clinical Bridge, a managed integration service, quickly establishes secure connectivity among the EHR and business applications, and maintains that connectivity to maximize uptime. This near real-time integration enables you to reduce errors and exceptions, eliminate manual data entry and paperwork, streamline workflow, and reduce supply expense.

Managed integrations

Infor Clinical Bridge is a managed integration service, meaning that Infor does all the work of coordinating with vendors, prebuilding adapters, implementing the interfaces and maintaining the data flow. This means that your clinical systems and finance suite are deeply integrated with multiple points of connection in weeks, not months.

Powered by Infor Cloverleaf® Integration Engine.

Rapid and robust connectivity

Bridging the divide between clinical and business systems is essential to your efforts to streamline operations, reduce supply expense, and maximize your staff's productivity. It is essential to realizing the value and impact of your ERP investment.

Bridging these systems, though, involves building and maintaining specialized integration across multiple applications and interfaces. And as these systems are updated over the course of the year, interfaces need to be maintained to continue realizing value.

With Infor Clinical Bridge, you'll have proven, pre-built adapters for connecting Infor business applications and key clinical systems, such as Epic and Cerner, throughout your healthcare organization. Designed to ensure compliance and continuity across upgrades and changes to these systems, the adapters connect to specific data sources, map to the appropriate fields, and make this data available to your users where they need it to make informed decisions.

Delivered as a managed service, you can take advantage of these pre-built adapters to connect your software solutions, get up and running faster, and keep running.

With Infor Clinical Bridge you can:

- **Synchronize Item Master** across supply chain and EHR in near real time, reducing errors, exceptions and stock outs.

- **Capture** supply demand automatically from your clinical systems.

- **Automate** your patient refund process, including status updates of checks.

- **Flow** patient information automatically between ADT, point of use, scheduling, case scheduling, and billing systems.

- **Provide** surgery systems with complete and up-to-date information continuously.

- **Track** supplies used by high revenue areas such as the cath lab or interventional radiology.

- **Automate** posting of captured charges from clinical department inventory systems to your billing system.

- **Automate** your patient revenue posting process.

- **Post** utilization expenses, at the time of use, directly into your patient revenue system.

- **Transfer** to Infor the responsibility to implement and maintain these connections, instead of adding a burden on your internal IT staff or managing a third party.

- **Enable** your staff to focus on what they do best.

Reduce redundancy and bridge the divide

Your clinical staff members want to devote their full attention to patients—but they can't do that if they're overburdened with administrative activities and financial paperwork. They shouldn't have to spend precious hours reconciling the output of multiple, unconnected software systems; they need to focus on delivering care. You can't eliminate all administrative tasks, but you can remove distracting and repetitive activities when you establish rich, intelligent connections between your clinical software and your business systems. By eliminating data silos and making information sharing automatic, you'll reduce costs, prevent errors, and increase patient satisfaction. You'll also create a more agile and efficient organization and use your technology more intelligently.

Benefits

- Unlocks data and enables communication between systems

- Improves efficiency and productivity for better financial results

- Enables the patient to have access and use of their own data

- Bridges the divide between expenses and revenue capture

- Captures and automates supply demand

- Streamlines patient billing
