# AccuRound by Infor Location Based Intelligence

Healthcare

## Create consistency in care through digital patient rounding

Fifteen-minute safety checks are a standard of care in the behavioral health setting. But traditional paper form documentation and manual processes often make it more difficult for care teams to complete these observations on time.

AccuRound® by Infor Location Based Intelligence (LBI) is specifically designed for hospital staff, observers, and leaders to streamline patient rounding in behavioral health, while providing access to real-time observation data. Care teams can prioritize observations and continually assess treatment plans. Leadership can validate compliance and proactively seek opportunities to drive improvements in process and care.

Easily view your list of assigned patients and quickly determine observations and rounds due next.

#### Real-time visibility

AccuRound's functionality gives observers mobile access to an aggregated list of assigned patients, as well as observations and rounds due next. Staff can access key clinical information, risk factors, and past observation data to easily plan for each patient with information at their fingertips.

AccuRound by Infor® Location based Intelligence gives staff better insight, such as:

- Patients within closest proximity to the observer's current location are automatically filtered to the top
- Automatically highlighted countdown timers provide a quick visual prompt as to which patient needs to be observed or rounded on next
- Easily identify any risk alerts for each patient prior to observation or round
- Access each patient's observation history
- Patient timers are automatically reset to the configured frequency post round

AccuRound can also be paired with Bluetooth low energy (BLE) or active real-time location system (RTLS) technology, depending on needs. AccuRound helps teams:

- Improve safety for patients and staff—Prioritize patient rounds and complete observations on time
- Create an environment for better patient care—Access prior observations, notes, and risk factors for each patient to continually evaluate treatment plans
- Ensure staff efficiency and accountability—Streamline patient care processes and eliminate paper documentation
- Monitor and measure compliance—Validate compliance to mitigate the errors and risk that come from manual documentation

AccuRound is designed to improve patient rounding processes through a streamlined digital experience for caregivers and staff.

Documenting each patient's activities and behavior during each rounding observation is simplified with the touch of a screen.

### Simplified documentation

With traditional, manual documentation, valuable patient rounding data is trapped on a paper form. Documenting each patient's activities and behavior during each rounding observation is simplified with the touch of a screen.

Staff becomes more informed and efficient with data and insights at their fingertips. AccuRound helps staff:

- Note any details from the patient's last observation for insight into care, allowing easy duplication of observations if findings have not changed
- Select from the configurable quick pick list to document who the patient was with, their activity, and behavior
- See documentation at a glance prior to saving with the timestamp automatically captured
- Add in any free text notes to provide additional context and detail around the observation
- Request immediate assistance with the click of a button
- Send automated notifications to staff, including the name of the staff requesting, as well as their current location

#### **Accurate reporting**

With AccuRound, you'll have access to a suite of real-time reports and analytics, all at the click of a button. Time-specific reports document compliance summaries, including automatically calculated rates for each patient, each observer, and the entire department.

Observations that fall outside of pre-established goals or thresholds are highlighted, providing insight into gaps in patient care processes.

AccuRound improves reporting and lets staff:

- View a summary of individual patient and department compliance statistics
- View observations grouped by patient, elapsed time between observations, and identify those exceeding pre-selected goals
- Drill down into each individual patient record to analyze clinical observation findings and provide better patient care

View a summary of individual patient and department compliance statistics.

Drill down into each individual patient record to analyze clinical observation findings.

Infor builds business software for specific industries in the cloud. With 17,000 employees and over 67,000 customers in more than 170 countries, Infor software is designed for progress. To learn more, please visit www.infor.com.
