

CASE STUDY

Ransa propels operational growth during the pandemic with Infor WMS

Ransa is a logistics operator with 80 years of experience providing efficient, agile, and adaptable solutions in 7 countries and 34 cities in Latin America. This Peruvian company has more than 7000 highly trained and specialized collaborators to meet the specific requirements of its customers from different economic sectors. To solve for its complex range of offerings and services, Ransa turned to a platform that could simplify, manage, and stabilize the organization's technological processes.

“ The variety of industries, dimensions and complexities of the operations served by Ransa requires a sufficiently adaptable technological platform. Infor WMS allows not only to respond to this variety of operational requirements, but also to simplify their technological management.”

JOSÉ LUIS GOMES

Gerente Comercial SOLA, Cerca Technology

Ransa currently has 46 distribution centers and 171 warehouses, representing a capacity of more than 3.5 million m2 in infrastructure to support all its customers in the region. Given the variety of operations in its different distribution centers, Ransa required a platform that is robust yet flexible enough to provide visibility and agility to its operations. This platform needed to raise the service levels provided to its customers, reduce its operating costs, and maximize the capacity of its distribution centers.

The initial scope of the project included the implementation of two accounts, one in Peru and the second in Ecuador. The implementation of 12 additional accounts was projected for the next 12 months. Doing so would create opportunities in efficiency and productivity, technological renovation, and traceability of operations.

Trinidad Camarasa, CTO at Ransa remarks, “We are the first company in the world that launched this cutting-edge system that was implemented to provide the best service experience to our customers, allowing them to be more efficient, productive and competitive.”

Going live

Ransa successfully launched Infor's cloud based warehouse management system, powered by AWS, to better manage their distribution activities in a comprehensive manner. With flexible configurability and intuitive usability, the solution is poised to power the next generation of Ransa's operations.

However, in May 2020 at an advanced stage of the project, the team was faced with the pandemic contingency, including travel and mobility restrictions in Peru.

Cerca Technology took on the challenge by adapting its methodology for the development of remote activities and the empowerment of on-site users to achieve the objectives set. With this innovative attitude and the commitment of both Cerca and Infor, it became possible to meet the expected deadlines, scope, and quality.

“ The sum of Infor WMS's capabilities, the team of highly trained professionals appointed for the project, and the clear definition and standardization of processes, allowed us to achieve the proposed objectives.”

JOSÉ LUIS GOMES

Gerente Comercial SOLA, Cerca Technology
