Infor WMS for retailers

R E T A I L

Engineered for speed, choice, and change

For the retail industry, intense competition and the need to stay up-to-date with consumer trends are constant business challenges. Retailers need to enable the smooth, accurate, and timely flow of goods to stores and customers. Retailers need a holistic and scalable warehouse management system (WMS) that efficiently executes core distribution processes, while maintaining real-time inventory at the discrete location level—allowing them to quickly move the right product to the right location at the lowest cost. Infor® WMS provides these capabilities and more via a cloud-based solution.

Clear the way for more business—faster

With Infor WMS, retailers can eliminate obstacles to fast information flow—speeding up the pace of business operations and delivering more customer value at a lower cost. Our comprehensive toolkit includes everything retailers need for warehouse management, labor management, task management, and transportation management in a single unified solution—either in the cloud or on premises.

Compared with batch ordering solutions, Infor WMS's scalable design allows for processing of high order volumes, while processing traditional brick-and-mortar and e-commerce shipments from the same inventory. The solution combines advanced warehousing capabilities with highly configurable rules, as well as 3D visualization and labor, task, and inventory management features. All of these features are brought together with a modern user experience that includes mobility consoles, web RF, voice support, in-context reports, and business intelligence dashboards.

Infor WMS delivers the flexibility and configurability retailers need to operate an agile, omni-channel business. The solution takes advantage of Infor OS, a comprehensive technology platform that enhances the enterprise experience, with organization-wide visibility into real-time information that drives business.

Master the challenge of omni-channel fulfillment with Infor WMS

Engage the workforce

Utilize Infor WMS's embedded labor management capabilities to monitor the workforce in real time and provide immediate feedback to optimize performance.

Achieve greater visibility

Interactive dashboards, reports, mobile applications, analytics, and business intelligence provide managers and supervisors with actionable information.

Collaborate and communicate

Infor WMS and Infor OS combine to streamline communication among employees with real-time chat and custom-built dashboards to improve productivity.

Optimize facilities

Innovative features—such as cross-docking, web receiving, attribute capture (including serialization), multi-sequenced put-away, task interleaving, dynamic slotting, wave management, and shipping (LTL and small parcel)—help to optimize processes while reducing operational costs.

Integrate easily

Infor OS provides seamless integration to eliminate information silos, allowing retailers to monitor the business from one platform and improve ROI on technology investments.

Realize the full potential of your business

Infor Infor WMS is a unified solution that gives retailers the scalability and configuration to thrive with tools that power the free flow of information and enable automation of complex and repetitive processes.

- Appointment scheduling with calendar view at date, door, and time
- Workstation, paper, and RF receiving
- Inventory attributes (e.g., serialization numbers, catch weight, expiration, style, size, color etc.)
- Supports bill of lading and advanced ship notices
- Transship, opportunistic cross-dock, and follow-through
- Configurable put-away plans at item zone level
- Inventory management (workstation and RF views)
- Advanced wave management
- Replenishment (voice- and labor-enabled)
- Picking (voice- and labor-enabled)
- E-commerce picking, packing and consolidation
- Loading (voice- and labor-enabled)
- Easy integration to small parcel shipping and TMS
- Task management (interleaving)
- Labor management
- Visual warehouse and yard visibility
- Customizable inbound and outbound labels
- Seamless integration to warehouse automation and MHE
