DigEplan

PUBLIC SECTOR

## Increase plan-review efficiency and accuracy

DigEplan for Infor® Public Sector fully digitizes the traditional plan-review process for municipal planners. By replacing complex, stand-alone, third-party solutions, DigEplan enables a digital review and approval workflow that's fully integrated into workflows and screens—including Rhythm® for Civics. Already trusted by 100+ counties, cities, states, and other municipalities around the world, DigEplan helps improve plan-review efficiency and allows municipal planners to spend less time on administrative duties. Infor has partnered directly with LCT Software to ensure that the DigEplan add-on seamlessly and fully integrates with Infor Public Sector to give users web-based viewing, annotation, commenting, intelligent stamping, archiving, and collaboration capabilities—all from within Infor Public Sector.

Embrace a digital transformation

For many, municipal planning has traditionally been a paper-driven process. And even for those organizations that have access to digital tools, many have had to make do with expensive and complex standalone systems—or even worse, inefficient, desktop-based PDF mark-up tools. Now, with the rapid digital evolution of fully automated operations and "smart cities," city planners can tap into a host of integrated technologies, such as DigEplan, to help them be more efficient and accurate.

A single place for customer support: DigEplan for Infor Public Sector is supported by Infor Customer Support—ensuring a consistent and integrated customer experience.

Figure 1

DigEplan for Infor Public Sector is fully integrated with the back office, workflows, and Rhythm.

Municipalities are turning to the internet of things (IoT) and artificial intelligence (AI) to manage everything from monitoring traffic meters to analyzing crime trends. State, county, and city planners are increasingly using 3D virtual reality to develop and present their work and plans. DigEplan for Infor Public Sector supports and enhances these capabilities by delivering a plan-review process that's embedded in Infor Public Sector for review, comment, correction, and approval—all accessible in a simplified workflow within a single application.

From directly within Infor Public Sector, municipal planners can simultaneously review plans and associated documentation—allowing them to apply corrections and project comments without having to switch to completely different applications and workflows. DigEplan automatically generates correction letters, which are then available in the back-office record and via Rhythm for Civics. This all takes place from within the familiar Infor Public Sector user interface—removing the inefficiencies of users having to switch to desktop applications or secondary, standalone plan-review systems.

Improve productivity

Because DigEplan's integration with Infor Public Sector is cloud-based, implementation can take place in a matter of days, not the months often required to set up third-party, stand-alone solutions . Once configured, DigEplan doesn't require separate client installs, workflows, document management, or portals—as it works in harmony with Infor Public Sector's back office and Rhythm for Civics. There are no files to upload or download or complex separate systems to manage or use. Directly from Infor Public Sector, users can:

- Collaborate, comment, and add in-context annotations and instructions to a plan and associated documentation

- See all annotations as overlays on the original plan sheets

- Automatically save all information directly to Infor Public Sector

- Instantly see and analyze resubmitted plan sheets to identify differences

- Automatically generate correction reports with a single click

Additionally, audits are quicker and more reliable because intelligent stamps allow reviewers to electronically sign and create reliable approval trails and quickly catch accidental changes.

DigEplan works with on-premises and cloud-based clients.

Leverage engineering-grade functionality directly from Infor Public Sector

DigEplan is designed specifically for Infor Public Sector and the requirements found in building and planning departments. The user interface is intuitive and easy to learn and use. Public sector organizations can benefit from DigEplan's robust plan-review capabilities, such as:

- Sheet management to support slip sheeting
- Uses codes, violations, and standard building codes already configured in Infor Public sector
- In-context annotations and instructions within PDF plans and Industry document types—including DWG, Microsoft Office, and image formats
- Overlay and compare capability allows users to instantly determine what's been added, removed, and changed in plans
- Intelligent, batch stamping processes that enable digital signoffs
- Digital audit paths that provide an extra layer of reliability
- Access for external partners through Rhythm for Civics
- Access to comments and markup plans for designated internal and external stakeholders
- Mobile support for inspectors and other users

See a rapid return on investment

Consistent challenges for public sector organizations typically include strict budget limitations and pressure to deliver more without adding resources. Because DigEplan for Infor Public Sector delivers a fully integrated plan-review solution, clients aren't paying for plan review functionality they already have in their existing Infor platforms. IT staff can spend less time managing separate systems, while employees no longer need to be trained on multiple solutions. This all adds up to a more efficient and speedier workflow, and a rapid return on investment.

Key benefits

- Fully integrated with your Infor Public Sector investment
- Eliminates complex, duplicate integration and functionality
- Accelerates permitting processes
- Enables local, state, and federal compliance
- Promotes collaboration among municipal staff, developers, contractors, and architects
- Promotes robust audit trails with all data in Infor Public Sector
- Provides easy access to critical, actionable information
- Enables external service providers to collaborate on plans
