

Infor Velocity Suite: Protect your business with built-in AI governance

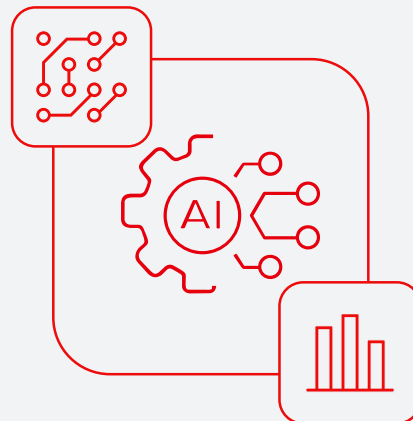

How our unified platform positions your AI initiatives for success

As businesses adopt more technology to drive growth and efficiency, maintaining visibility and control becomes more difficult. Understanding what systems are in place, who owns them, what data they access, and the risks they introduce can be a complex and time-consuming challenge.

The key is to make governance part of the implementation process from the outset, rather than treating it as an afterthought. With Infor Velocity Suite, businesses get state-of-the-art AI solutions with governance built in, ensuring every action remains auditable, traceable, and compliant.

Springboard for success

As AI becomes embedded in more business processes, organizations must manage not only greater volumes of data, but also a growing web of risk, accountability, and regulatory requirements. Compliance teams require greater control and visibility to identify issues earlier, alongside the need to improve efficiency and cut down on manual tasks.

Keep pace with demand

To help organizations scale AI with confidence, Infor Velocity Suite delivers governance capabilities that provide the visibility, control, and accountability needed across the AI lifecycle.

Built for scale

As AI adoption expands, governance requirements become more complex. Infor Velocity Suite embeds governance, compliance, and regulatory controls directly into the foundation of the platform, helping organizations scale innovation without creating new oversight burdens.

End-to-end visibility

From solution ownership and data access to activity tracking and audit trails, Infor Velocity Suite provides the transparency organizations need to govern AI confidently at scale.

Accelerated risk investigation

Automated incident creation, intelligent summarization, and audit-ready documentation help compliance teams identify issues faster, reduce manual effort, and gain greater visibility into potential risks.

Proven path to progress

For AI initiatives to be successful, governance should be baked in.

Infor Velocity Suite combines AI, agents, automation, and built-in governance into one unified platform. With industry-specific AI agents and people operating as one coordinated system, tasks and decisions can be executed at machine speed without encountering governance-related bottlenecks, ensuring innovation can move quickly without compromising compliance, security, or oversight.
