

Manage transportation performance and spend in real time with Infor Nexus Global Transportation Management System

Why a global transportation management system matters

In today’s interconnected world, managing global supply chains demands precision and real-time insights to proactively sense and respond to ensure optimal performance. Organizations grapple with complexities such as fluctuating demand, disruptions, and rising costs. A networked transportation management system (TMS) helps to drive operational excellence, optimize costs, and meet customer expectations.

A better global logistics strategy

Infor Nexus™ Global Transportation Management System (Global TMS) is a multimodal transportation platform—offering seamless sourcing, planning, visibility, and execution. The solution combines international logistics with advanced domestic transport functionality to enable global control tower orchestration.

Infor™ Nexus Global TMS delivers network benefits with multi-party transportation collaboration and execution. Organizations can synchronize transportation processes across regional divisions and business units, third-party logistics (3PL) providers, and existing TMSs to make their global transportation activities a competitive differentiator, not just a cost center.

Elevating global supply chains with Infor Nexus Global TMS

As part of the Infor Nexus network strategy, Infor Nexus Global TMS delivers powerful supply chain and transportation visibility with global planning, optimization, and performance management across multimodal, multi-leg, and multi-stop product journeys.

This collaborative supply chain platform captures the daily transport decisions made across business units, carriers, and 3PL providers to drive continuous service improvement and total freight spend management in global enterprises.

End-to-end global transportation management

Enable end-to-end, closed-loop processes on a single platform to manage transportation spend and performance in real time, ensuring on-time, in-full delivery to customers. Discover our full suite of solutions:

Infor Nexus Transportation Sourcing

Procurement is critical to balancing cost and service. Infor Nexus Transportation Sourcing transforms the freight procurement process with:

- **Configurable bid templates** to standardize and compare carrier offers
- **Spend optimization models** and flexible scenarios to consider variables—such as defined allocations, free days, transit time, and historical performance data—to determine optimal carrier allocations
- **Digital contract management** with collaborative amendments to maintain consistency across providers

Infor Nexus Transportation Planning & Optimization

Effective planning is the foundation of efficient supply chains. Infor Nexus Transportation Planning & Optimization leverages self-learning algorithms and scalable computing power to craft optimized transportation strategies. Key capabilities include:

- **Multi-leg and multimodal planning** for flexible logistics solutions
- **Automated workflows** seamlessly connected to upstream and downstream processes, minimizing manual effort and driving cost savings
- **Advanced algorithms** that adapt to disruptions and streamline route and carrier selection

Infor Nexus Transportation Execution

Executing booking and tendering seamlessly across network partners is vital for bridging the gap between planning and operations. Infor Nexus Transportation Execution simplifies this complexity through:

- **Pre-integrated carrier networks** to reduce onboarding and integration costs
- **Standardized workflows** for booking, shipping instructions, and tendering with carriers and forwarders across modes with automated updates and embedded allocation management
- **Advanced sailing schedules** augmenting published carrier information with continuous vessel tracking and predictive network intelligence to present the most accurate schedules

Infor Nexus Supply Chain Visibility

Visibility is the backbone of a responsive supply chain. Infor Nexus Supply Chain Visibility (SCV) provides:

- **Real-time tracking** of orders, shipments, and items across international multi-leg, multimodal moves with visualizations and embedded analytics for proactive decision-making
- **Predictive insights and proactive resolutions** powered by artificial intelligence (AI) on network data to mitigate risks before they escalate
- **Collaborative tools** to enhance communication, execution, and transparency across internal and external stakeholders

Infor Nexus Freight Pay & Audit

Managing freight billing and payments can be overwhelming. Infor Nexus Freight Pay & Audit simplifies this process with automation and integration that includes:

- **Pre-rated shipments for earlier freight accruals** and better financial control
- **Line-level auditing of base rates and accessorials** to ensure accuracy and prevent overpayment
- **Collaborative dispute workflow** for faster issue resolution and enhanced relationships with carriers

Global transportation network

More than a transportation control tower, Infor Nexus Global TMS helps orchestrate carriers and service providers globally:

- Overcome internal and external business silos
- Avoid rip-and-replace
- Improve end-customer experience with better service
- Control and contain global freight spend
- Meet demand plans more consistently while cutting costs
- Unlock greater agility

3PLs network collaboration and flexibility

Infor Nexus's transportation network includes partner 3PLs that have fully integrated the Infor Nexus platform into their own operations. These white-label solutions enhance their service offerings, enabling them to provide expanded capabilities to their customers. This integration streamlines processes, enhances advanced planning and execution, and offers the flexibility to quickly adapt to evolving multi-party processes and business needs.

The Infor Nexus Global TMS also integrates seamlessly with 3PL providers, forwarders, and carriers worldwide, offering businesses a centralized platform to manage supply chain visibility and critical business processes. This unified approach eliminates the silos often associated with multi-party logistics operations, ensuring that all stakeholders operate and collaborate on the same real-time data.

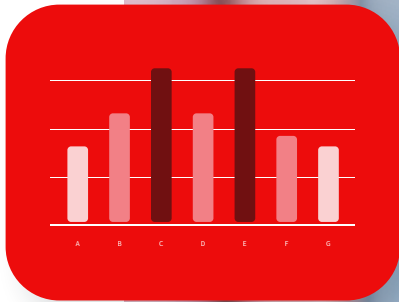

By focusing on service and performance, Infor Nexus Global TMS enables organizations to objectively measure their 3PL and forwarder partners against key performance indicators (KPIs), driving accountability and fostering continuous improvement. Furthermore, the platform mitigates outsourcing risks by providing real-time insights into partner performance, empowering businesses to make informed decisions, adapt to disruptions, and maintain operational excellence.

Unified benefits of Infor Nexus Global TMS

Infor Nexus delivers a transformative approach to global supply chain management by combining advanced algorithms, automated processes, and predictive tools leveraging network data. The centralized platforms foster seamless collaboration, and adaptive technologies equip businesses to navigate the complexities of modern, global supply chains and ensure resilience against disruptions. Real-time visibility and analytics empower informed decision-making, enabling organizations to optimize transportation spend and drive continuous improvements across supply chain processes.

Ensure a transparent and agile supply chain capable of meeting the demands of a dynamic global market with Infor Nexus—the leading platform that seamlessly integrates planning, execution, visibility, and spend management across your supply chain.

About Infor Nexus

Infor Nexus is the leading end-to-end global supply chain platform, helping companies achieve unmatched visibility for over 25 years. Infor Nexus connects a network of over 90,000 brands, retailers, manufacturers, suppliers, logistics providers, and banks on a single-instance network platform to seamlessly orchestrate global supply chain processes from source to delivery and payment. Companies can streamline their operations, eliminating inefficiencies and waste, gaining data-driven insights, and optimizing the flow of capital for improved agility, resilience and sustainability.
