

Infor Velocity Suite for industrial manufacturing

Making the agentic enterprise a reality

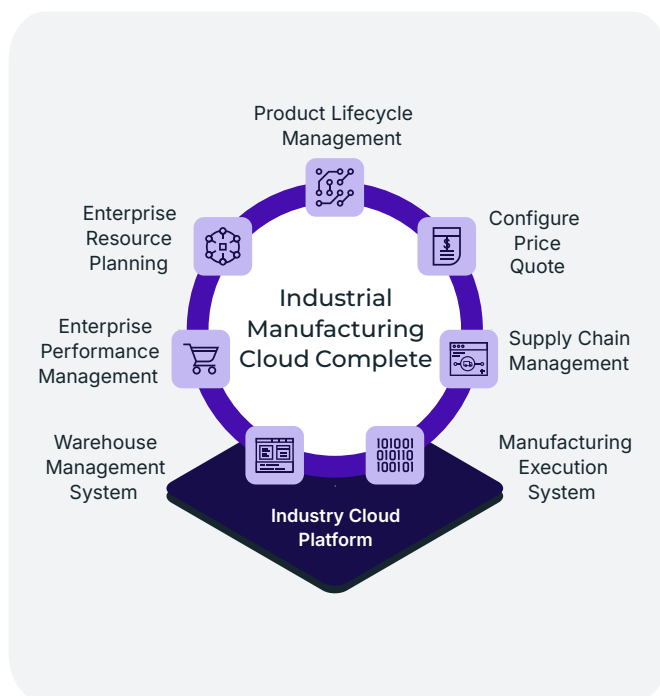

Industrial manufacturers are under pressure to do more with less. Skilled labor shortages, supply chain disruption, rising costs, and increasing customer expectations are forcing manufacturers to improve productivity and make faster decisions. Infor™ Velocity Suite helps manufacturers accelerate business performance using industry-specific artificial intelligence (AI), automation, process intelligence, and prebuilt use cases.

Built on the foundation running your business

Infor CloudSuite™ for Industrial Manufacturing is designed specifically for industrial manufacturers, with industry-specific processes, data models, and workflows that support complex environments—including engineer-to-order (ETO), make-to-order (MTO), and project-based operations.

Industry-specific foundation

Infor Velocity Suite extends Infor CloudSuite with AI, automation, and process intelligence—leveraging operational context already running your business, from engineering and procurement to production, warehousing, and service.

The four elements of your agentic enterprise:

Built for industrial manufacturing

Pre-trained on your industry's data, workflows, and compliance rules. Deliver value from day one without months of setup.

Empower your workforce

Role-based workspaces and generative AI (GenAI) assistants that keep teams focused on high-priority work while agents handle routine tasks.

Automate and optimize operations

End-to-end workflows across systems with fewer manual handoffs. Processes run consistently and efficiently.

Trusted and controlled innovation

Every human and AI action is auditable, traceable, and compliant by default.

Industrial manufacturing: AI where it counts

Infor Industry AI Agents are built for your business. A purchasing agent in industrial manufacturing understands bill of materials, lot traceability, and supplier lead times, because that industry expertise is built into the product. Here is what that means across your biggest challenges:

CHALLENGE	IN THE AGENTIC ENTERPRISE
Workforce transformation and skills gap	Adaptive experiences: AI agents surface the next best action, helping new staff become productive faster, while preserving institutional knowledge embedded in the system.
Productivity and quality	Autonomous orchestration: Process intelligence flags anomalies in real time, with up to 98% faster issue identification, so teams can focus on resolution and continuous improvement.
Supply chain responsiveness	Autonomous orchestration: AI-driven demand signals and automated alerts help teams respond to disruptions before they impact production, with full end-to-end visibility across suppliers.
Product and process innovation	Precise industry agents: Connected product lifecycle management (PLM), configure, price, quote (CPQ), and enterprise resource planning (ERP) give engineering, sales, and operations a shared, real-time view of data, enabling faster collaboration and product innovation.
Profitability and margin pressure	Precise industry agents: AI proactively surfaces cost variances, procurement risk, and yield opportunities so finance and operations can act before it hits the profit and loss (P&L).
Customer lifetime value	Adaptive experiences: Agentic workflows connect after-market service, order management, and customer data so teams can respond faster and personalize every interaction without adding headcount.
Data integrity and compliance	Governed velocity: One source of truth with regional data residency. Every human and AI action is logged, traceable, and compliant by default.

Infor Velocity Suite: The catalyst

Infor combines industry AI agents, process mining, automation, prebuilt use cases, and implementation support in a single package. Infor Velocity Suite helps you move faster toward becoming an agentic enterprise, starting wherever you are today.

Out-of-the-box industry agents

Pre-trained on your industry's data model. No configuration required. Value from day one.

Guided path to proven AI value

A prescriptive roadmap from wherever you are today: on-premises, mid-migration, or underutilizing the cloud.

Continuous co-innovation

Forward-deployed engineers work alongside your team. When a use case is not in the catalog, we help build it with you.

Predictable total cost of ownership (TCO)

Flat fee, unlimited consumption. One package: AI agents, process mining, automation, and implementation support.

Proven customer results

A global poultry-processing equipment manufacturer operating in 100+ countries automated accounts payable with Infor Velocity Suite, saving more than 1,000 hours a year and freeing teams for higher-value work.

How we work together

Infor supports your technology adoption throughout the entire journey. We work with our customers before go-live, at go-live, and beyond, helping them continue to build and innovate as business needs evolve.

Doing the work together

Infor's forward-deployed engineers work alongside your team throughout implementation and beyond, not handing off a system and walking away.

Solutions made for you

When the use case you need is not in the catalog, our engineers build it with you. Your business shapes the outcome, not a generic template.

The art of the possible

We stay engaged after go-live. Every innovation feeds the next. Co-innovation is an ongoing cycle of discovery, development, measurement, and expansion.

About Infor

Infor is a global leader in business cloud software products for companies in industry-specific markets. Infor builds complete industry suites in the cloud and efficiently deploys technology that puts the user experience first, leverages data science, and integrates easily into existing systems. Over 67,000 organizations worldwide rely on Infor to help overcome market disruptions and achieve business-wide digital transformation.
