

The Infor logo is a red square with the word "infor" in white lowercase letters. The background of the entire page is a photograph of a man in a grey suit and glasses, smiling and holding a tablet, standing in a factory setting with industrial machinery.

BROCHURE

Infor Enterprise Manufacturing Hub

Applied Innovation

Streamline your manufacturing shop floor

Discrete manufacturers and suppliers face increasingly complex demands when it comes to satisfying their customers. Products often contain complicated, high-tech parts and components requiring specialized tools and processes. But with increasingly tighter margins and growing pressure for speedier manufacturing processes to offer greater value for customers, manual systems can't keep up with the demands.

Infor® Enterprise Manufacturing Hub (EMH) gives you one strategic, comprehensive view of the shop floor that helps you orchestrate your operations with precision—including collecting data from your machinery and integrating it with back-office systems. With Infor EMH, you can avoid unplanned downtime and frequent change orders, thereby achieving the fine-tuned efficiency you need to remain competitive.

Leverage smart factory technology

Infor EMH is a state-of-the-art industrial internet of things (IIoT) solution that provides real-time insights and analytics into plant floor operations. The solution seamlessly integrates shop floor machine data with back-office financial systems. Through machine learning and advanced analytics, Infor EMH helps you anticipate maintenance needs so you can analyze risk, resolve asset issues quickly, reduce machine downtime, and improve technician productivity. With the solution's cloud-based, always-on capability, you get the uptime needed to keep your manufacturing operations performing optimally.

Reduce machine stoppages and unplanned downtime

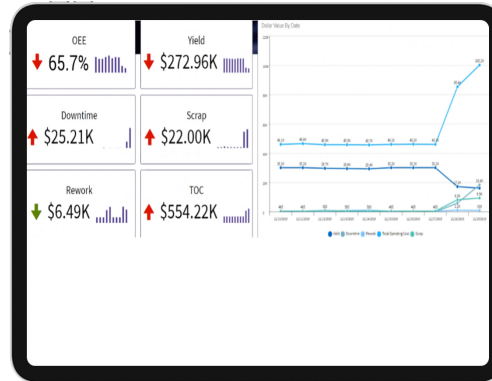

With Infor EMH, you'll gain powerful smart factory capabilities, such as:

- **Real-time insight**—By collecting machine data from the shop floor and integrating it with your ERP order data, Infor EMH gives you the insight you need to meet complex demands, backed by always-on capability.
- **Detailed reporting**—Sophisticated reporting tools let you monitor all performance data in-depth over time. Actionable key performance indicators help you uncover waste and identify potential opportunities for improvement.
- **Sophisticated visualizations**—Real-time visualizations of shop floor machines give you a quick overview of what's happening—or not happening—so you can make well-informed decisions and achieve greater control of your production processes.
- **Automatic alerts**—Alerting tools automatically inform you about key incidents on the shop floor, so you can take corrective action quickly.
- **Full connectivity**—An embedded connectivity engine gives you the ability to seamlessly interface with all machine controls, including robotics, material handling equipment, and IIoT-enabled facility assets (such as overhead doors and lighting).

Harmonize your manufacturing operations

The combination of powerful ERP solutions, like Infor LN, and the Infor EMH technology platform help you manage your network of people, technology, activities, information, and resources more effectively and economically. You'll have the tools to digitize and harmonize all your manufacturing operations across your global enterprise.

Infor Enterprise Manufacturing Hub

Real-time dashboards help you track key performance indicators—such as downtime, scrap, and rework—so you can continue to refine processes and measure improvements.

You'll be able to:

- Increase machine utilization
- Optimize production facilities and key manufacturing processes
- Gain greater visibility into planned versus actual progress
- Achieve sustainable production gains
- Deliver exceptional levels of customer fulfillment

Take the next step

Infor Enterprise Manufacturing Hub is one element of a holistic, end-to-end approach to plant modernization. It seamlessly integrates with Infor CloudSuite™ industry solutions to provide results-driven improvement to your manufacturing systems and processes.
