

# Infor CloudSuite Industrial Enterprise for IM&E: From complexity to digital confidence for CIOs

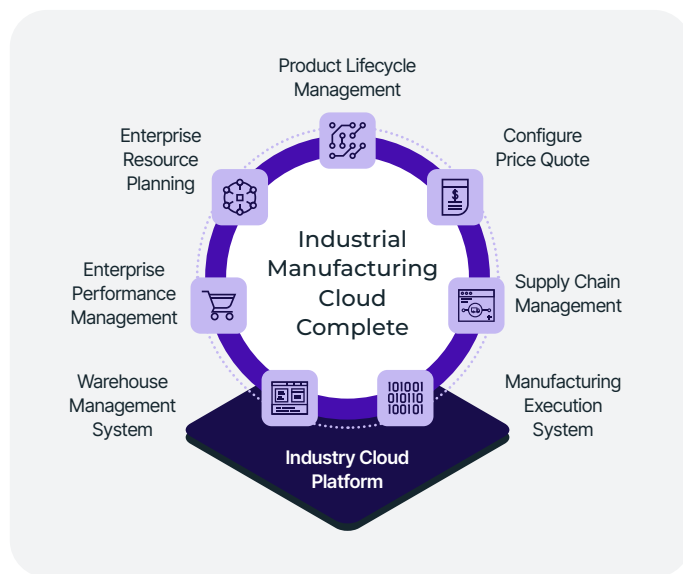

The world has changed—has your ERP? How are you modernizing core systems without destabilizing operations? How quickly can you integrate acquisitions and new technologies without creating security gaps? And how confident are you that your cloud strategy will deliver measurable value—fast?

For chief information officers (CIOs) in industrial machinery and equipment (IM&E), complexity is not just technical—it’s strategic. Multi-site, multi-company operations, legacy integrations, and rising cyber threats expose the limits of traditional enterprise resource planning (ERP) systems. Fragmented architectures slow innovation, inflate cost-to-maintain, and amplify risk. The result is a widening value void between transformation goals and information technology (IT) reality. **Infor CloudSuite™ Industrial Enterprise closes that gap with a technology foundation engineered for IM&E complexity, so you can turn disruption into digital confidence.**

## Business goals delivered with speed and security

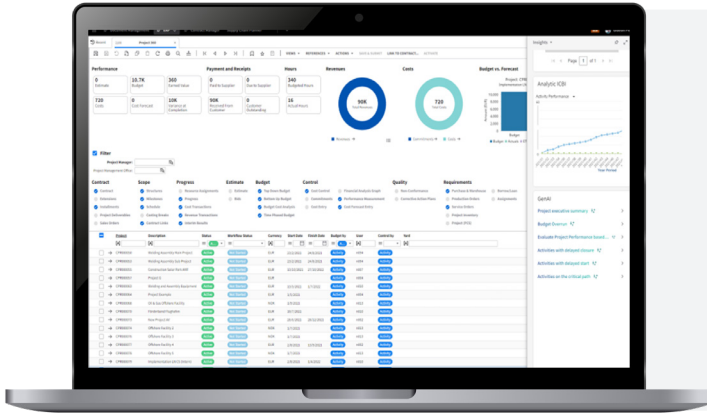

At board level, the mandate is clear—accelerate digital transformation, strengthen cybersecurity, and enable innovation without destabilizing operations. With a cloud ERP at its core, Infor CloudSuite Industrial Enterprise aligns to these priorities from day one. It’s an industry-specific CloudSuite, not a generic platform: processes are preconfigured for IM&E micro-vertical; data models reflect engineer-to-order (ETO), make-to-order (MTO), and project-centric manufacturing; and embedded artificial intelligence (AI) and robotic process intelligence convert visibility into action—faster. Multi-tenant architecture ensures scalability and resilience, while governance and compliance are embedded into every workflow.

## Integration without compromise: One connected cloud-based platform for unlimited possibilities

Unlike legacy ERP, Infor CloudSuite Industrial Enterprise is designed for interoperability and composability. Standardized application programming interfaces (APIs) and Infor Industry Cloud Platform seamlessly integrate with product lifecycle management (PLM), manufacturing execution system (MES), configure, price, quote (CPQ), and third-party applications—reducing brittle customizations and accelerating time-to-value. Preconfigured industry processes shorten deployment timelines, while cloud-native services allow you to extend capabilities without heavy coding. Security is built-in: role-based access, encryption, and continuous compliance monitoring protect sensitive data across global operations.

## Built-in innovation: AI, automation, and Industry 4.0 readiness

Infor™ Velocity Suite brings AI-driven automation to Infor CloudSuite Industrial Enterprise—cutting manual effort, detecting issues early, and optimizing workflows without custom development. Combined with real-time data across MES, PLM, CPQ, supply chain management (SCM), and warehouse management system (WMS), it enables CIOs to deliver a connected, Industry 4.0-ready platform.

## The ROI is real: Evidence and results that matter

Confidence comes from evidence, not promises. Independent validation reinforces the business case:

**114% ROI**  
in 20 months

CIOs in similar environments report consistent outcomes: faster integration of legacy and inherited systems, lower technical debt through standardized architectures, and quicker access to modern capabilities without destabilizing operations.

Turning complexity into competitive advantage with real, measurable impact for customers:

Solar Turbines unified global operations on one cloud platform to simplify integration and scale securely.

## From complexity to clarity: The CIO advantage

If you've ever asked, "How do we modernize without disrupting operations?" or "How do we secure innovation without inflating risk?", Infor CloudSuite Industrial Enterprise is designed for precisely those questions. Replace brittle, bespoke ERP landscapes with an industry-specific Infor CloudSuite that moves as fast as your strategy.

With Infor Velocity Suite for AI-driven improvement; MES, PLM, CPQ, SCM, and WMS as an integrated capability stack; and cloud-native security embedded end-to-end, you gain an IT backbone that converts complexity into control—and control into innovation.

## Get more with Infor and disrupt your industry, not your operations

Bridge the value void and modernize with confidence—build a secure, scalable, and interoperable cloud foundation that reduces technical debt, strengthens governance, and keeps IM&E operations future-ready with Infor CloudSuite Industrial Enterprise. Get in touch today to begin your digital transformation.

## About Infor

Infor is a global leader in business cloud software products for companies in industry-specific markets. Infor builds complete industry suites in the cloud and efficiently deploys technology that puts the user experience first, leverages data science, and integrates easily into existing systems. Over 67,000 organizations worldwide rely on Infor to help overcome market disruptions and achieve business-wide digital transformation.
