Infor Financials & Supply Management

Empowering finance teams with modern, cloud-based solutions

Industry-specific functionality powered in the cloud

Infor® Financials & Supply Management (FSM) delivers comprehensive enterprise resource planning (ERP) capabilities along with industry-specific functionality without the need for extensive customizations or integrations. The solution combines the Infor cloud platform built on infrastructure services from Amazon Web Services® (AWS®) and Infor OS (Operating Service).

Infor FSM fuels your business with networked analytics and a best-in-class user experience augmented by artificial intelligence (AI). With Infor FSM your organization can:

- Stay current on the latest versions of your software.

- Access applications on any device, anywhere with Infor Go.

- Scale cloud services to handle usage peaks and valleys.

- Reduce your total cost of ownership and capital investment.

- Integrate cloud and on-premises applications with pre-built application programming interfaces (APIs).

- Democratize data across cloud and legacy applications to drive rich data insights.

- Leverage pre-built analytics and dashboards for value-added decision support.

Experience ultimate security and flexibility infused with deep industry-specific functionality that eliminates the need for costly and limiting customizations. Keep applications current and connected, leverage powerful functionality, and optimize critical business processes with Infor Financials & Supply Management.

> **Infor has given us the ability to integrate with our clinical systems and partners in a way that was impossible with our legacy system. The integration has helped us be more efficient, control our costs, and ultimately serve our community better.**

OLIVER GALICKI

Director of IT Services, Slidell Memorial Hospital

Reduce software complexities

The genesis of Infor FSM is Lawson® Financials, a solution that has served healthcare, services industries, public sector, and other industries for more than 40 years. Infor FSM is a multi-tenant software suite built on a modern technology stack with full extensibility and the security of the AWS cloud.

Infor FSM has a rich API architecture that eliminates the need for bolt-on solutions, providing a world-class user experience with an extensible design that retires disparate vendor solutions for global ledger, accounts payable, accounts receivable, and similar activities. The Infor global customer base leverages a single version of our software (on a single code base) in the multi-tenant cloud that is updated monthly and replete with end-to-end functionality across the financials value chain.

Give modern professionals modern tools

For too long, enterprises have been left to cope with dated technology that doesn't reflect the way work gets done in a modern, global business environment. Infor FSM can change this paradigm.

Infor FSM is a proven, ready-to-run cloud service that is purpose-built to scale. Role based, data driven, consumer inspired, mobile enabled, and built for the cloud, Infor FSM delivers end-to-end capabilities designed for the needs of those who matter most—your users. Here's how:

- Infor FSM uses modern ERP technology and an intuitive user interface to help you gain a more complete view of your business performance.

- Infor's OS platform provides Infor FSM users with a world-class technology suite of services which serve as a unifying foundation for your business software ecosystem.

- Infor's service delivery methodology accelerates productivity and ensures that you maximize value from your technology investment.
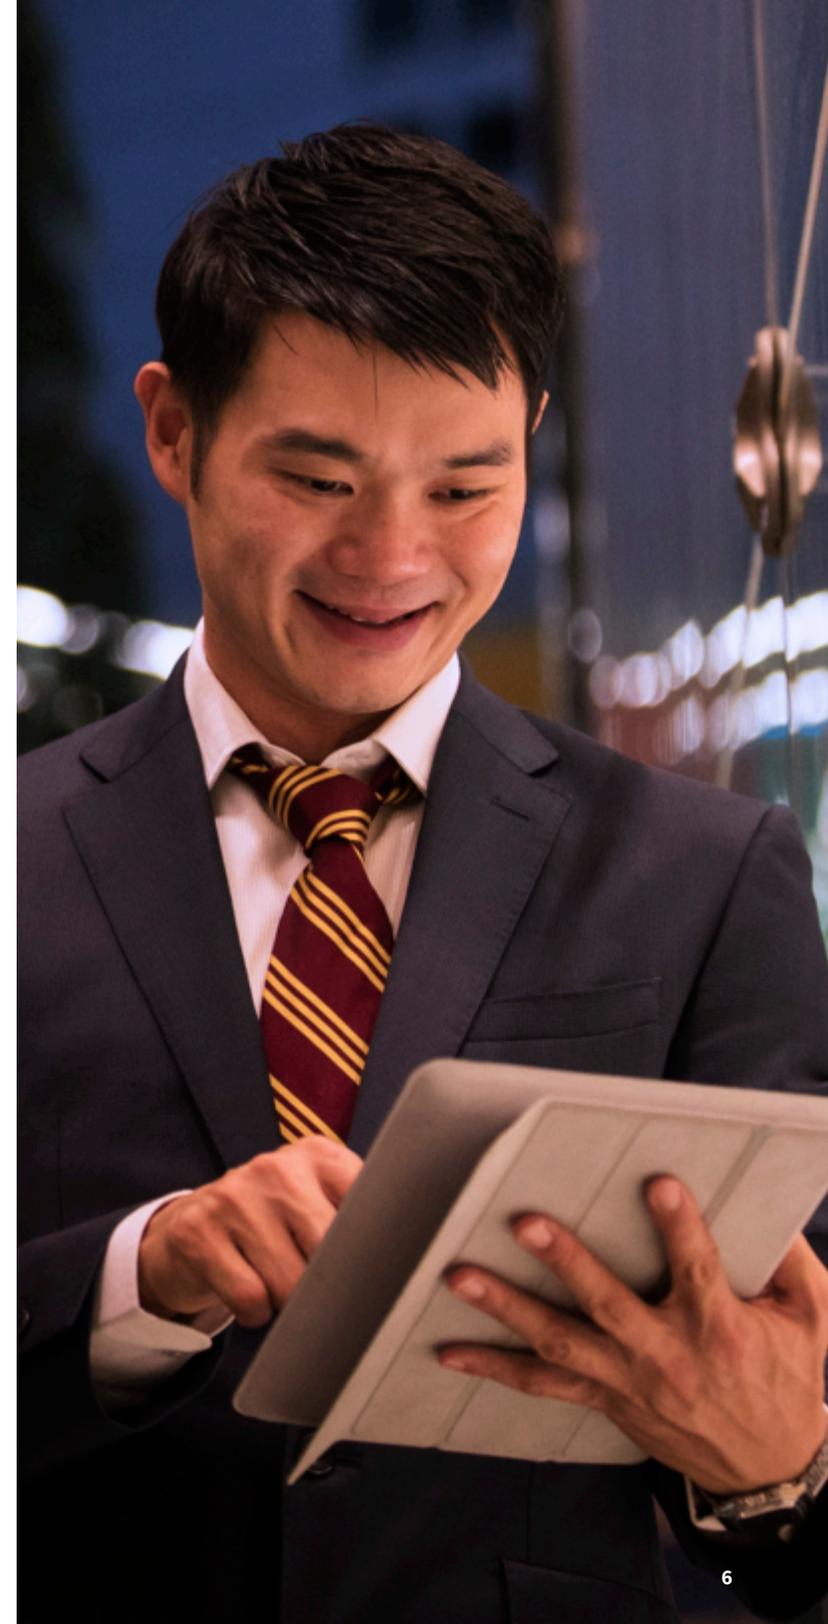

Support modern users with capabilities and experiences

Infor FSM enables global business, networked analytics, and a user experience that can be augmented by artificial intelligence.

Pre-built industry capabilities

Prepackaged workflows, content, integrations, and analytics are designed with industry best practices, informed by thousands of implementations.

Cloud design drives business agility

The ability to deliver a simplified user experience, data aggregation, workflow integration, automatic upgrades, and a data lake.

Actionable insights with enterprise analytics

An enterprise business intelligence (BI) and analytics platform that enables accurate, data-driven decisions.

Extending the enterprise with networked commerce

Virtual, vertically integrated, self-orchestrating value chains leverage data to run supply chains for end-to-end visibility.

AI unlocks business potential

AI that anticipates, recommends, and derives insights—while powering robotic process automation, machine learning, and IoT.

Prioritizing time to value

Infor's service delivery methodology supports accelerated productivity and ensures maximum value from technology investments.

Be more productive with Infor FSM

Leverage a next-gen global ledger

The global ledger is a complete record of all financial transactions, creating the flexibility to accommodate entry into global markets. This software solution empowers stakeholders to streamline operations and simplify financial analysis and reporting with native integrations, automated business flows, and centralized accounting rules.

• Access unlimited financial calendars

• Leverage unlimited ledgers and basis reporting

• Utilize unlimited dimension strings

Expand data usability

Infor FSM's next-gen global ledger can be used as a data warehouse, importing both financial and non-financial data to drive strategic business decisions. Think healthcare providers pulling in clinical data to calculate cost per patient; retailers incorporating big data for targeted campaigns; or public sector organizations working with demographic data to help budget and plan community services.

• Leverage relevant information for faster, better decisions

• Provide a unified repository for capturing enterprise data

• Ensure data fidelity, governance, security, and access
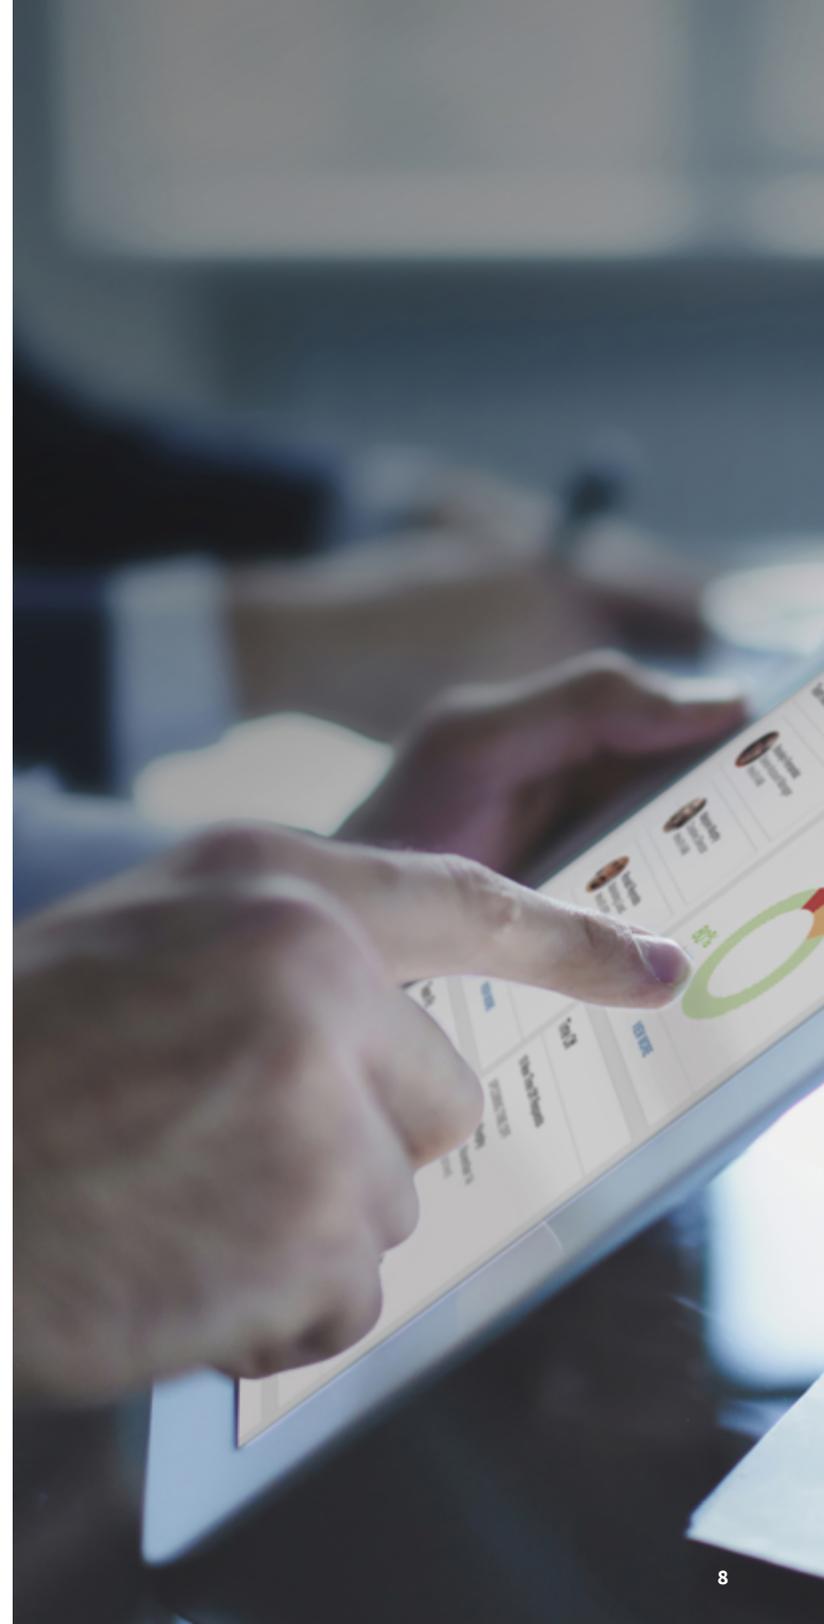

Define unlimited attributes

Infor FSM lets users define unlimited attributes on any field or transaction within any process and report on them. For example, attributes such as type of facility, square footage, and number of employees can be attached to locations to allow reporting revenue not only by location but also by attribute value across all locations.

• Add new dimension strings

• Tailor dimension strings to meet business or industry-specific requirements

• Offer flexibility with unlimited attributes

Meet complex reporting requirements

Infor FSM allows for an unlimited number of ledgers to store adjustments, eliminations, currency gains or losses, and allocations. Ledgers can be combined with a chart of accounts and calendars to create a basis definition, and unlimited bases can be defined to deliver financial information for a wide variety of reporting needs.

• Build compliance controls

• Support standard regulations

• Provide reports on controls and compliance

Streamline sourcing and procurement

Infor FSM offers innovative supply management capabilities that work together as a complete source-to-settle solution. That gives users full visibility of indirect spend and helps identify opportunities to control it by increasing compliance and leverage with suppliers.

• Optimize spend by effectively managing the full source-to-settle process

• Uncover consolidation and cost savings opportunities

• Combine deep functionality with flexible deployment
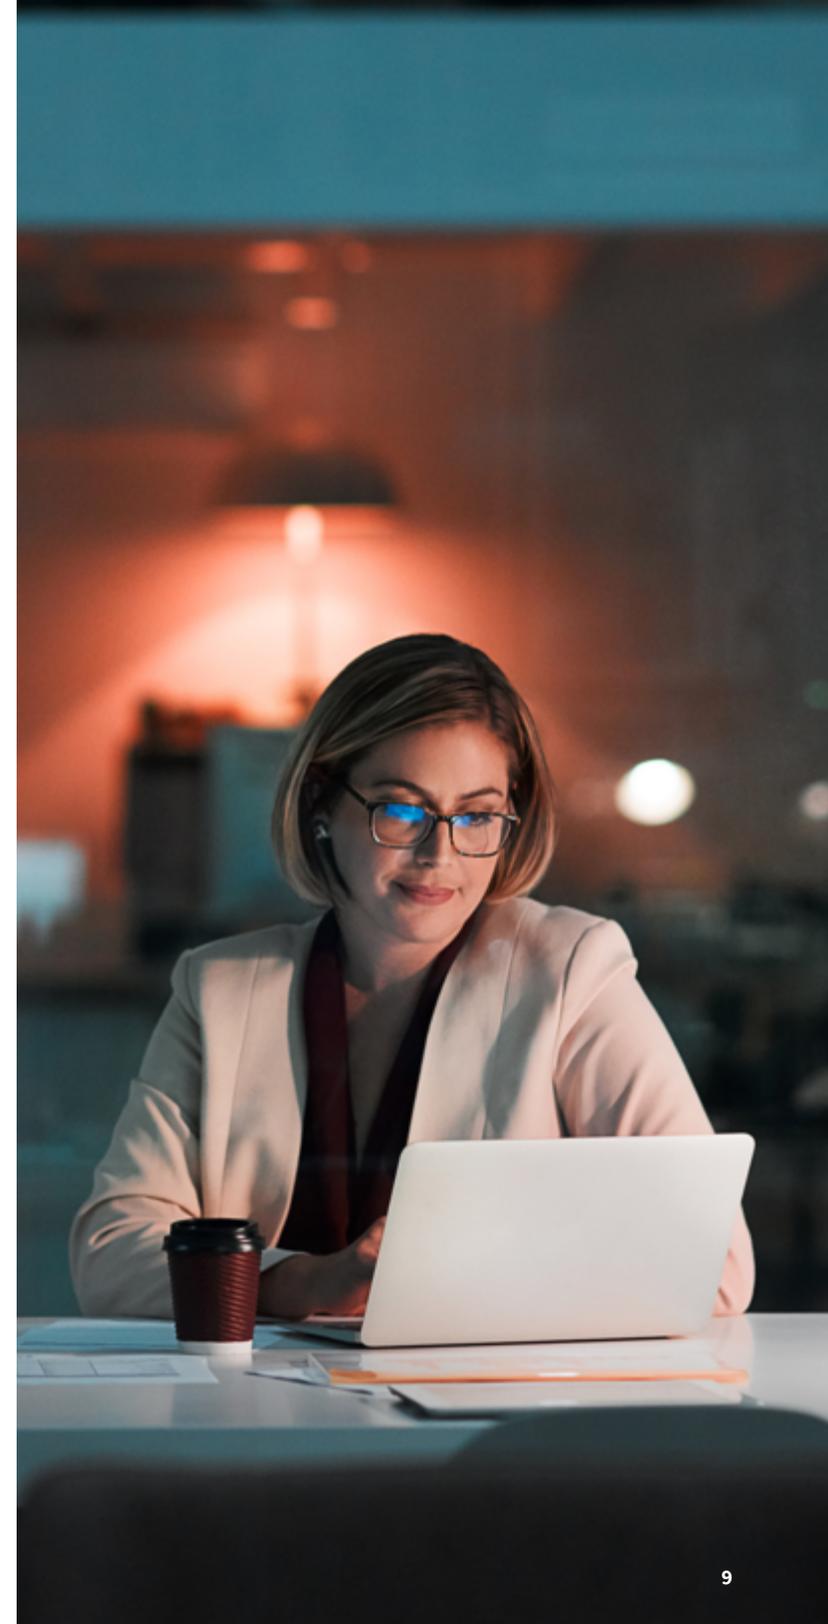

What makes Infor FSM different?

A next-generation global ledger

Infor FSM injects fresh thinking into the general ledger, combining the core functionality with high flexibility.

Enhanced enterprise experience

Utilize Infor FSM to centralize access to applications with single sign-on, providing real-time, organization-wide visibility to streamline communication.

Seamless integration

Integrate Infor and third-party enterprise products in the cloud, on-premises, or in hybrid deployments with Infor's advanced integrated PaaS capabilities and API gateway.

Transformational data as a service

Provide data acquisition technologies and a unified repository for capturing enterprise data. Infor's data lake ensures data fidelity, governance, security, and access.

Artificial intelligence

Transform historically complex AI technologies (natural language processing, intelligent automation, and machine learning) into valuable and attainable enterprise goals.

Data and system governance

Integrate governance, risk, and compliance (GRC) software to monitor regulatory and statutory standards and proactively updates critical applications.

Extensibility

Thanks to Infor's optional developer tools, with minimal coding you can easily create the right experience, whether it's an intuitive consumer-grade web interface, a high productivity form, or a business process to replace customizations.

Spotlight on the global ledger

Analyze and present information for effective decision support

With the global ledger, you'll do much more than free your accounting staff from the burden of consolidating data from disparate sources. You'll open more time for high-value activities, such as controlling costs and improving accountability. Infor integration also helps you build a stable foundation for strong corporate governance so that you can feel confident that your system of financial controls encompasses all the functions of your organization—and that the information you report is complete and accurate.

Unlimited financial calendars

Can accommodate different fiscal year-ends and other reporting needs.

Unlimited ledgers

Can be defined to store adjustments, eliminations, currency gains or losses, and allocations.

Unlimited bases

Can be defined to deliver financial information for regional regulatory requirements, management reporting requirements, consolidations, or other reporting needs.

Additional segments

Can define up to 10 additional segments for reporting—in addition to standard segments of basis, year, period, system, entity, accounting unit, and project.

Unlimited attributes

Can be defined on any field or transaction within any process. Attributes attached to transaction distributions flow through to the journal and are available for reporting and analysis.

Infor FSM includes all the tools you need to succeed

Infor FSM

- Global ledger
- Close management
- Receivables and billing
- Intercompany billing
- Reconciliation management
- Cash management
- Fund accounting
- Analytics
- Payables and matching
- Project ledger
- Asset accounting
- Document management
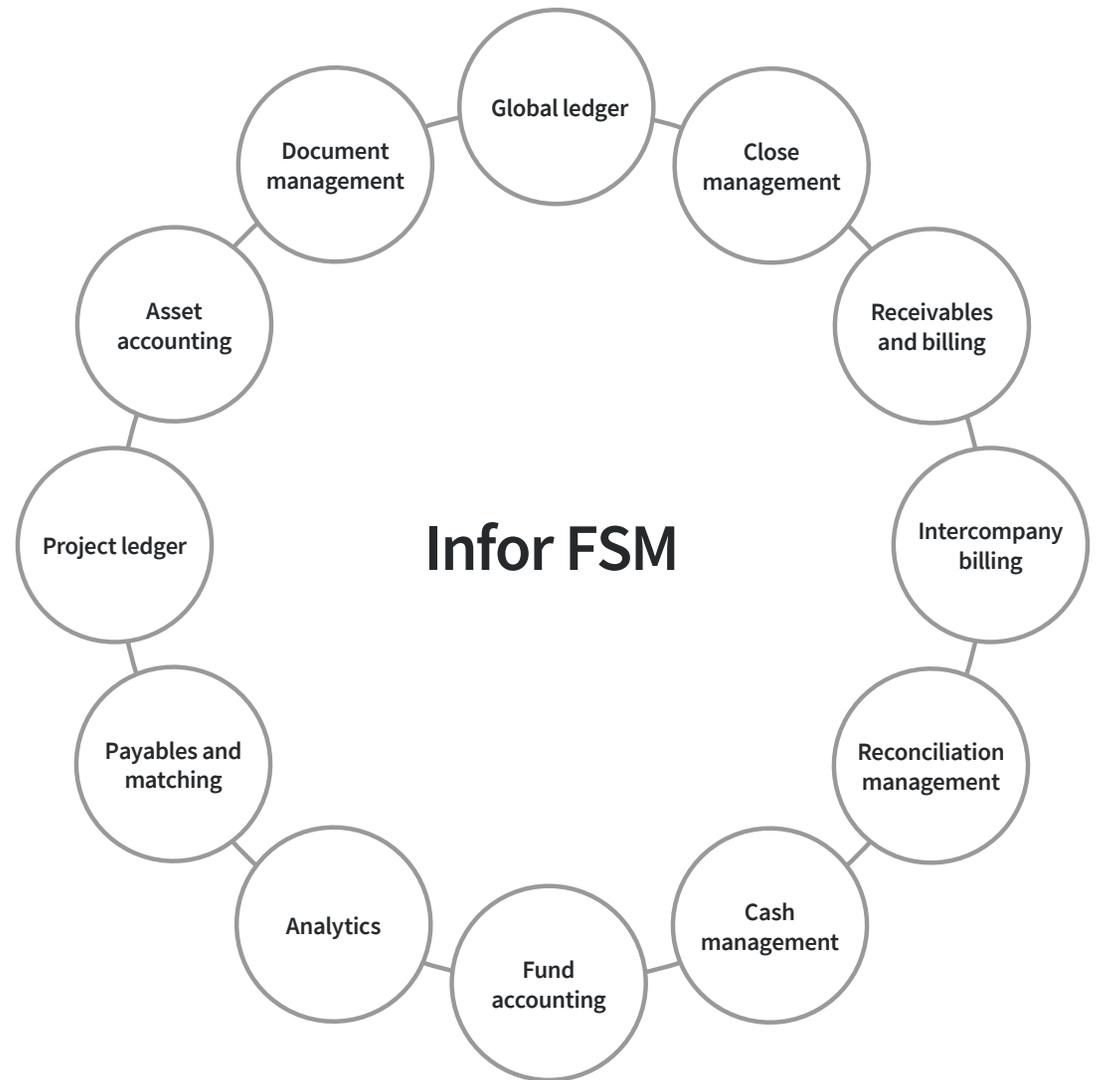

Spotlight on supply management

Fully integrated supply management

Infor supply management solutions provide end-to-end capabilities, fully integrated because that's the way software should be. The solution is delivered in the cloud to ensure ultimate security and flexibility. It's also infused with deep industry-specific functionality that eliminates costly and limiting customizations.

The ability to closely track supplies and streamline order processes doesn't just reduce costs. It also eliminates error-prone, time-consuming, manual tasks and allows staff to focus on more productive activities, like managing supplier relationships. Supply management software from Infor is a complete source-to-settle solution that provides full visibility of indirect spend and helps to identify opportunities to control spend by increasing compliance and leverage with suppliers. The results? Greater efficiency, stronger supplier relationships, and lower costs.

Delivering productivity with Infor Agility

Infor Agility is Infor's innovative service delivery model that impacts all aspects of all aspects of your lifecycle. It is guided by decades of successful ERP implementations and has been continuously refined with the goal of delivering implementations on time and on budget, ultimately delivering faster value for you. Infor Agility combines aspects of agile methodology with advanced implementation accelerators, process intelligence tooling, a data migration factory approach, testing as a service, consumerized learning, and managed services options.

Implementation accelerators (IA)

IAs are industry-focused, preconfigured, yet flexible processes designed specifically for Infor application suites. They are designed to deliver core industry-leading business processes, along with application configurations, implementation playbook, tools, and templates. These will deliver a prescriptive, repeatable process that will drive predictable results while helping to lower risk and increase time to value for you.

Business process assessment (60-30-10) approach

Infor believes that "not all business processes are created equal." Our strategic 60-30-10™ approach allows us to clearly identify, by leveraging a detailed IA Business Process Assessment workshop, the processes that are most important in helping you differentiate yourselves and deliver maximum value. This model allows us to deliver our industry CloudSuites with most of the necessary processes already built in and ready to adopt; about a third of the remaining processes are refined/configured to suit your needs; and the final layer receives the most focus, to truly make our solutions a competitive differentiator for your business.

- **60%**—These are core industry-leading processes delivered in the form of our pre-configured implementation accelerators. You can easily adopt these with very little effort, spending time primarily on only the validation of these core standard IA processes. These core processes are adopted "as is."

- **30%**—These are the processes that truly enable differentiation for you. We work with you to configure these processes, providing specific guidance on how to optimize their solution. While this phase takes a little more time and effort, it allows us to provide options that you can tailor and configure to best fit your specific business needs.

- **10%**—These processes are where we spend the most time and resource capacity. Focusing on those processes that are highly differentiating/unique to you, the objective is to enable you to help make dramatically better business decisions and provide a better experience to your customers.

By eliminating the need for any customized work within the 60% of the processes, we are able to free up time to collaborate with you and focus on the 30% (differentiating) and 10% (unique) processes and help you achieve a better business outcome.

Data migration

The risks and costs of do-it-yourself data migration may not be clear until it's too late. Too many in-house processes can lead to go-live delays, or worse, production problems resulting from poor data migration. Infor Data Migration services use established methodologies to successfully, accurately, and quickly complete critical, customer data migrations. This proven service helps to eliminate costly in-house errors, ensures implementation stay on track, and sets a solid foundation for future data management processes.

Testing as a service

Infor Testing as a Service (TaaS) delivers a single platform for testing the full range of functional and non-functional requirements for deploying multiple tools. Whether it's user experience, functional requirements, data services, integration services, or application performance, organizations can deploy releases with confidence and minimize post-deployment issues. Infor TaaS provides the same tools and content that Infor uses for QA and testing during application deployment, including test libraries and scripts developed across the TaaS community.

Consumerized learning

Infor's consumerized learning is an innovative approach that provides a personalized enterprise learning environment. Users can consume training in a variety of formats that are modern, easy to use, and delivered in an embedded, contextualized, consumer-grade user experience.

Managed services

When the implementation is complete, you want to concentrate on running your businesses. Infor Managed Services allows you to do just that. With a service agreement tailored to their requirements, you can build and maintain extensions to address their unique processes to increase productivity and customer service.
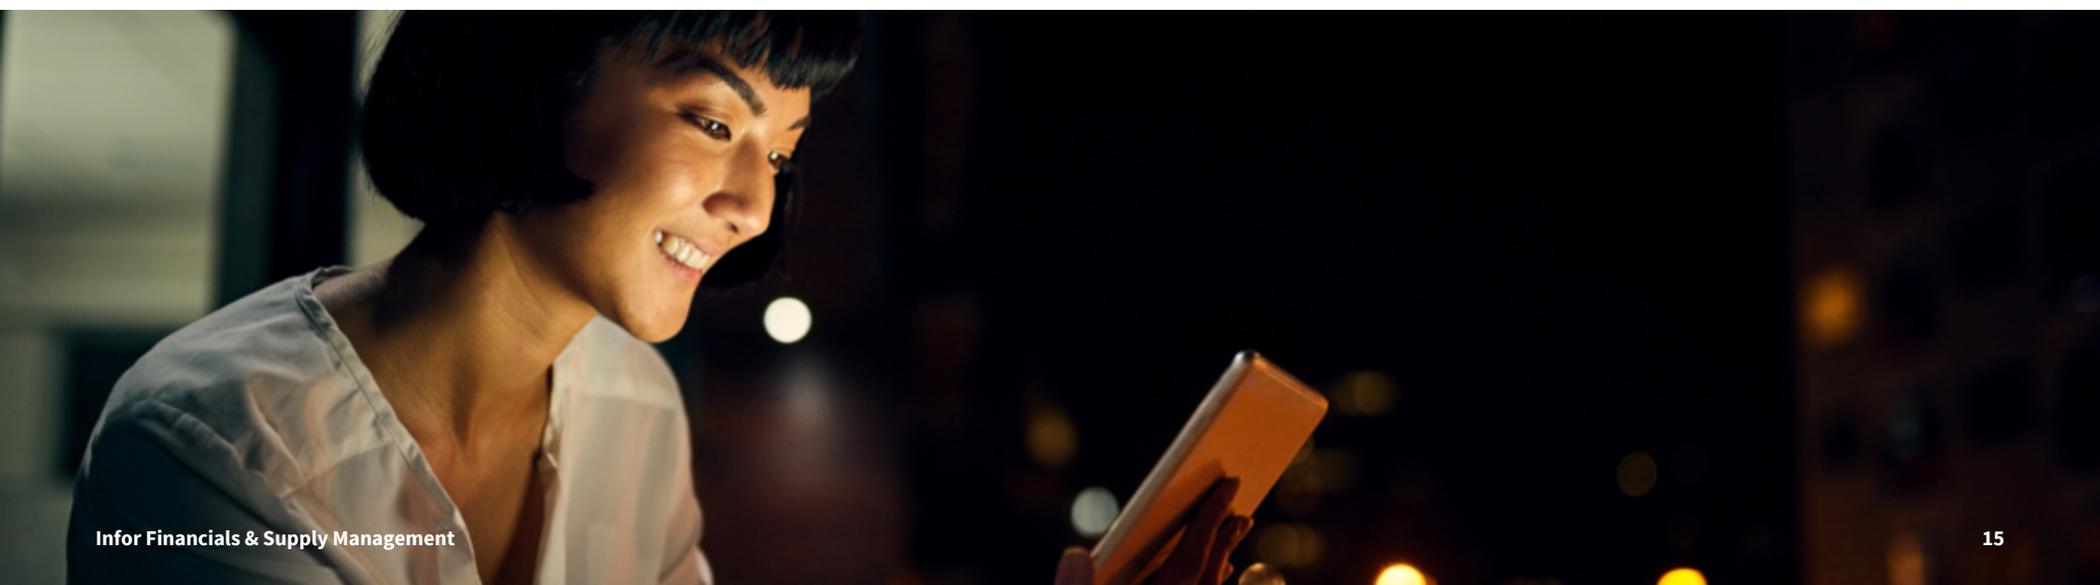

Transform your business with Infor

Infor is a strategic, innovative technology partner to more than 67,000 clients and a global enterprise leader in business cloud software. Unlike other options available in the market, our software solutions are industry-specific and built for the cloud. We help organizations go to the next level every single day.

We understand the importance of building a strong technology foundation to enable enterprises to intelligently and cost-effectively scale toward the future while always keeping present goals firmly in mind.

Why choose Infor Financials & Supply Management

• Reduce total cost of ownership and free up capital to support growth initiatives

• Speed time-to-value with fast deployment

• Quickly scale infrastructure to support a growing business

• Automate previously manual tasks and processes across operations

• Get real-time visibility across the entire enterprise
