

Navigating the path to AI-driven value

Five essentials for turning AI into precise business outcomes

Building AI into your organization can be a long, complex path. You need intentional design, data-powered industry context, and measurable outcomes to ensure ROI. Infor makes this journey smoother. By removing guesswork with a value-guided strategy, we help you turn AI into long-term success.

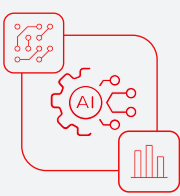

Your checklist for value-guided AI innovation

To achieve maximum business value from your AI transformation, there are five essentials to focus on:

1 Depend on your data

AI without trustworthy data leads to poor business outcomes. For a true transformation, your organization needs to ensure data-readiness through high-quality, consistent information.

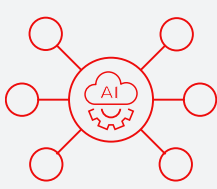

Get stronger insights

Infor ensures your data is clean, connected, and accessible so that your AI solutions have actionable insights to work from for better decision-making and maximum business innovation.

2 Prepare the right foundation

To implement different AI solutions securely and at scale, your organization needs a strong operating environment for data to live on. In other words, a cloud platform.

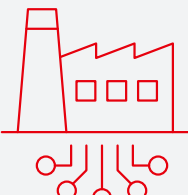

Banish data silos

Governed for enterprise use and backed by AWS, Infor Industry Cloud Platform provides the fuel and horsepower your AI and data needs through a single, consistent source of truth across all business functions while keeping operations secure.

3 Invest with your industry in mind

Every industry has unique challenges and goals. Generic AI can cause misalignment and slow adoption; your organization needs solutions tailored to your industry needs and KPIs.

Power greater results

Infor Industry AI solutions are built for industry fit at the microvertical level—not a configuration layer—with pre-built industry-specific data models, process catalogs and role-based workflows that help you reduce complexity and accelerate value creation.

4 Choose solutions that scale

AI investment that's concentrated on one core business function won't result in real innovation. Instead, you need solutions that can evolve with your organization's needs.

Drive business growth

With flexible, enterprise AI solutions including Process Mining, Robotic Process Automation (RPA), and GenAI, Infor provides the scale and specificity you need to see an organization-wide AI transformation—all in a single package.

5 Get set for agentic

AI agents are set to revolutionize how impactful AI can be. To realize maximum value from this investment, your organization needs to be well-prepared for their arrival.

Prepare for what's next

Infor Industry AI agents act like seasoned team members from day one. Infor delivers agentic workflows with industry context and use cases built in, enabling processes to run end-to-end across systems.

Unlock continuous innovation with AI

By unifying your data through an open, innovation-ready platform that brings together advanced technologies and AI-driven intelligence, Infor is the ideal partner for removing complexity and realizing business value in your AI transformation.

Ready to become an agentic enterprise? Infor Velocity Suite is the bridge to get you there. Velocity Suite is an all-inclusive AI package that lets you adopt AI where the value is highest, move at the pace your business demands, and scale with predictable cost on a governed platform built for your industry.

Start your value-guided journey to AI transformation

Discover how Infor supports you throughout your entire AI transformation to ensure real return on investment.
