

Distribution management for Infor CloudSuite Healthcare

Bring warehouse and distribution operations into your healthcare ERP without the cost or complexity of a separate platform

Most health systems run a hybrid supply chain across hospitals, ambulatory sites, clinics, and physician offices, and ongoing disruptions only add pressure to inventory planning. Healthcare distribution has distinct requirements that general-purpose systems weren't built to handle: clinical workflows, multi-facility visibility, and tight integration with enterprise resource planning (ERP) and electronic health record (EHR) data.

Distribution management, built into Infor™ CloudSuite Healthcare, is purpose-built for health systems. It delivers the structure and control needed for complex healthcare distribution, without the overhead of a stand-alone system and without the integration work.

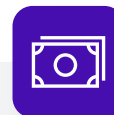

Run a more efficient operation

Smarter picking, layouts, and automated expiration handling to move more product with fewer errors and less waste

Protect clinical continuity

Faster, more accurate fulfillment means fewer stockouts, fewer delays, and better patient care

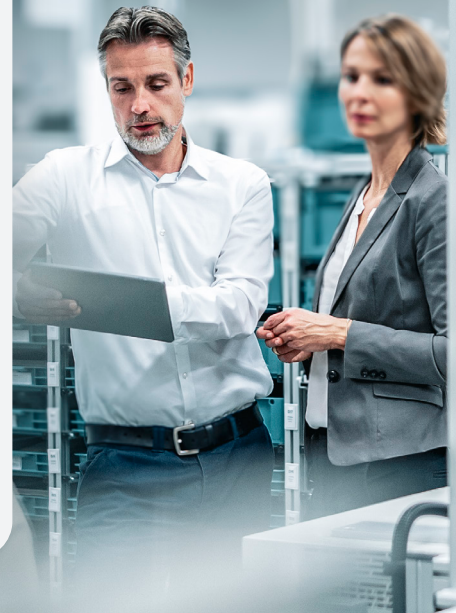

Lower total cost of ownership

Cut the cost, integration overhead, and ongoing maintenance for a separate WMS

**Distribution management delivers:**

- 1** Real-time control of inventory across receiving, storage, picking, and delivery
- 2** Automatic expiration and lot tracking to reduce waste and support audit, compliance, and recall readiness
- 3** Configurable storage zones for refrigerated, hazardous, and secured inventory
- 4** Mobile-ready execution through Mobile Supply Chain Management (MSCM) for warehouse and distribution staff
- 5** Native integration with Infor CloudSuite Healthcare financials and supply chain management

**Capabilities****Smarter receiving and putaway**

Capture expiration dates and serial numbers at intake, then direct staff to the right location with putaway rules

**Automatic expiration management**

Guides staff to the product with the earliest expiration date first through directed picking, reducing waste in clinical supplies

**Optimized warehouse layouts**

Place high-frequency items in forward pick zones, and assign warehouse staff by skill, certification, or zone, including quick-pick areas and overstock locations

**Faster, more accurate picking**

Group picks by date, priority, or item attributes, and coordinate pickers across zones to speed throughput on complex orders by supporting wave picking

**Traceable shipments to the point of care**

Print customizable tote labels with quick response (QR) codes, manage container capacity, and track every container from warehouse to delivery

**End-to-end delivery visibility**

Manage vehicle trips, track shipments from dock to delivery, and capture proof of delivery

Why distribution management

Distribution management is purpose-built for the realities of healthcare operations. That means:

Greater control across sites

One platform, one data model, and consistent processes across hospitals, clinics, and central distribution

Healthcare-specific by design

Built around the shelf-life and controlled-handling requirements that generic WMS solutions weren't designed for

Audit-ready out of the box

Because lot, expiration, and transaction history are captured natively, compliance reporting and recall response require no extra tooling

Faster time to value

Integrated into Infor CloudSuite™ Healthcare, so existing configurations carry forward and there's no separate WMS or add-on module to license, deploy, or maintain

About Infor

Infor is a global leader in business cloud software products for companies in industry-specific markets. Infor builds complete industry suites in the cloud and efficiently deploys technology that puts the user experience first, leverages data science, and integrates easily into existing systems. Over 67,000 organizations worldwide rely on Infor to help overcome market disruptions and achieve business-wide digital transformation.
