Sketch to store in the cloud

Innovate, collaborate, and design with Infor PLM for Fashion

Accelerate innovation with Infor PLM for Fashion

Whether a company has 20 users or more than 2,000, Infor® PLM for Fashion is designed to accelerate development cycles to get ideas to market faster. With its intuitive, personalized user interface, Infor PLM for Fashion is an end-to-end solution that connects every aspect of a product's lifecycle, from the first sketch to the store.

Contents

Take a closer look

In today's highly competitive and consumer-driven marketplace, fashion companies are under enormous pressure to create exciting new products at a moment's notice. By providing a central repository for storing and accessing design and development information, Infor PLM for Fashion can help businesses meet this need for speed, while also making sure new styles and collections are delivered with consistent quality—at the right time and right price.

Energize your team with an innovative user experience

- Work faster and smarter than ever with an intuitive interface, simple drag-and-drop functionality, and personalized homepages that can be created using widgets. Homepages help users set up predefined ways of working—allowing them to find styles in a certain status, or respond to notifications and comments. There's also no need to worry about user counts; Infor PLM for Fashion can scale to fit any business' needs—anywhere, anytime.

Connect design with data

- Featuring a bidirectional Adobe® Illustrator® plugin, Infor PLM for Fashion helps creative teams work with the tools they know and love. New concepts can be directly uploaded into the system and quickly brought to life through a set of visual libraries, pre-configured templates, and tools for mass creation and updating. With creative design ideas connected to commercial objectives and technical specifications, Infor PLM for Fashion increases accuracy, reduces waste, and helps commercialize new styles faster.

Collaborate across your value chain, anytime, anywhere, on any device

- By creating an open environment for creative, technical, and commercial teams, Infor PLM for Fashion breaks down silos and helps key stakeholders work together, using the same set of real-time data. By helping businesses share information with offices locally and globally, Infor PLM for Fashion integrates internal departments and selected partners—which increases accuracy, reduces manual data entry, and speeds up the entire decision-making process. Since work is done in the cloud, users can work the way they want, whether on a PC, Mac, tablet, or smartphone.

Invest in technology for the future

- Built on Infor OS, Infor PLM for Fashion brings productivity, business process, and operational insights that go beyond enabling business—it drives it. Teams can work smarter and faster with built-in internal and external collaboration.

Reduce time to value

- Unlike legacy launches, cloud launches can be completed in months—not years.

Harness the power of Infor OS

The platform for a future-proof, digitally driven organization

Infor Operating Service (OS) serves as the unifying foundation for the entire business ecosystem, including Infor PLM for Fashion. Its focus is on delivering technology that drives business—putting the user at the center of every experience and powering digital transformation from the ground up. The result is a connected, intelligent network that automates, anticipates, predicts, and informs stakeholders in everything they do.
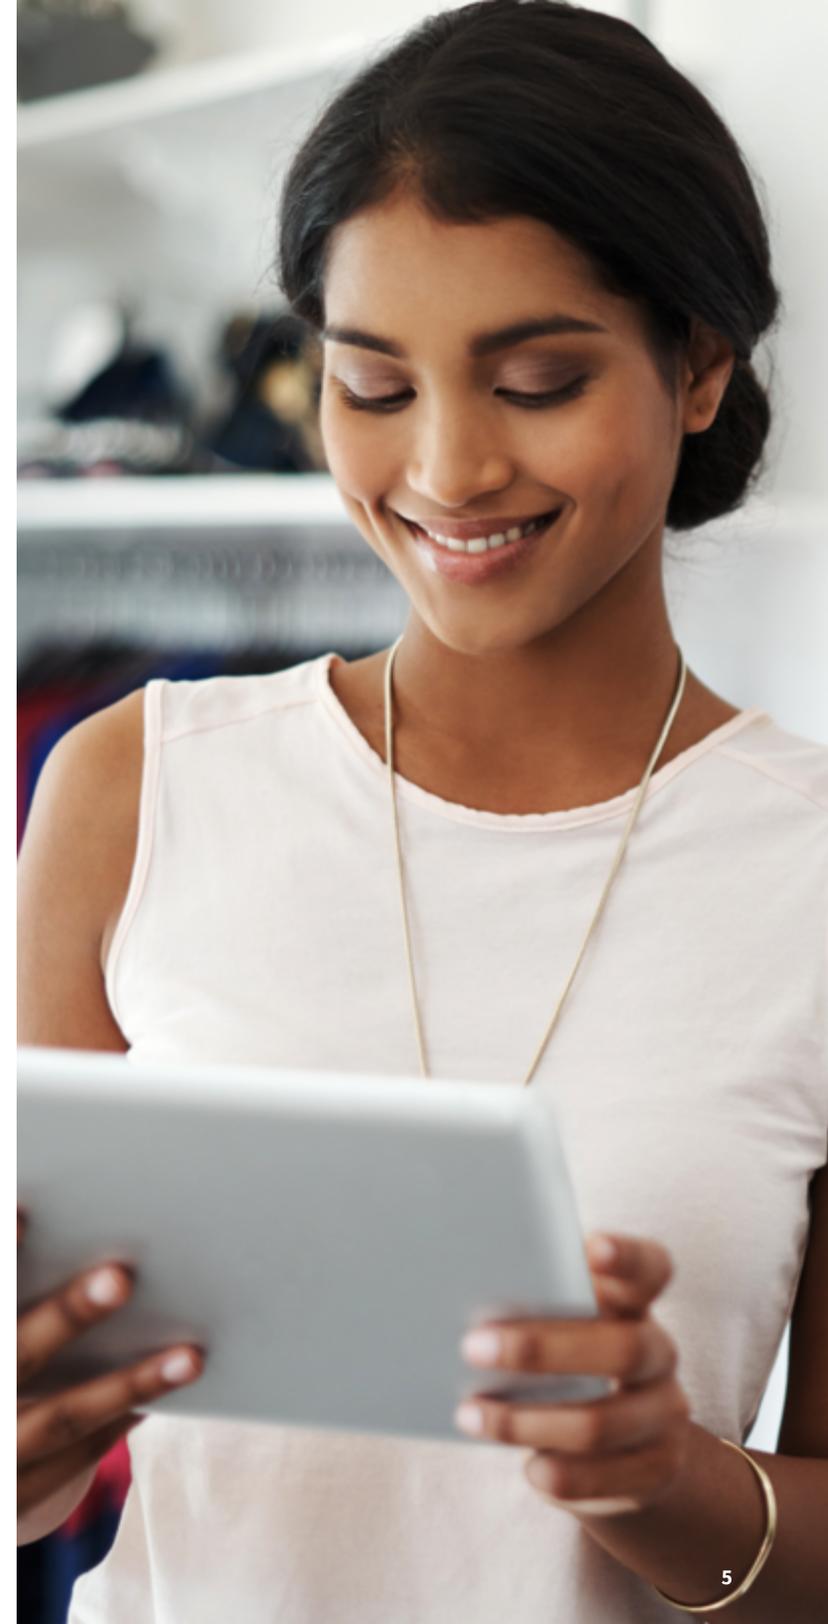

Specifically tailored for apparel, footwear, textiles, accessories, luxury goods, and retail fashion companies, Infor PLM for Fashion can scale to fit any enterprise.

Collaborate in the cloud with Ming.le

Infor PLM for Fashion provides user-configurable homepages, allowing the user to drag-and-drop, add, and multi-select role-based views that provide a personalized experience to fit the way they work.

Leveraging the collaborative power of Infor Ming.le®, and the Infor OS platform, users can see tasks, notifications, and peer comments from Infor PLM for Fashion and other applications connected into Ming.le.
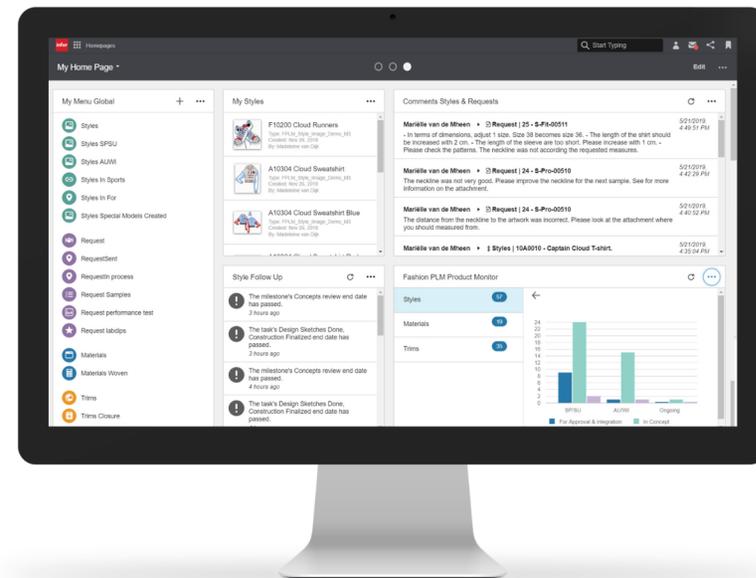

Enjoy an intuitive user experience

Infor PLM for Fashion's intuitive user experience makes it easy to use—which means quicker user adoption with lower training requirements, and thus, shorter time to value. Custom homepages, drag-and-drop features, and task-driven functionality make mass creation and updates simpler than ever.

By linking planning, design, development and pre-production activities on a common platform, Infor PLM for Fashion delivers a single set of accurate, real-time data that increases visibility and provides the foundation for closer collaboration and unified teamwork.

Automatically store images for future use

Infor PLM for Fashion is equipped with Infor Document Management (IDM), which serves as a single storage hub for images, documents, and files from Infor PLM for Fashion and your other applications. IDM is seamlessly integrated to Infor PLM for Fashion, so users won't even notice that while adding images, documents, and files in PLM, they'll be automatically stored in the IDM system simultaneously for future use. Users can view their images and document thumbnails directly in PLM's document library without ever logging directly into IDM.

Document management

Infor Document Management (IDM) includes:

- Report building tool and storage for generated reports

- Compatibility with different document types based on meta data models, check-in/out

- Mobile application available for users to upload files and images on the go

- Simple search and navigation capabilities
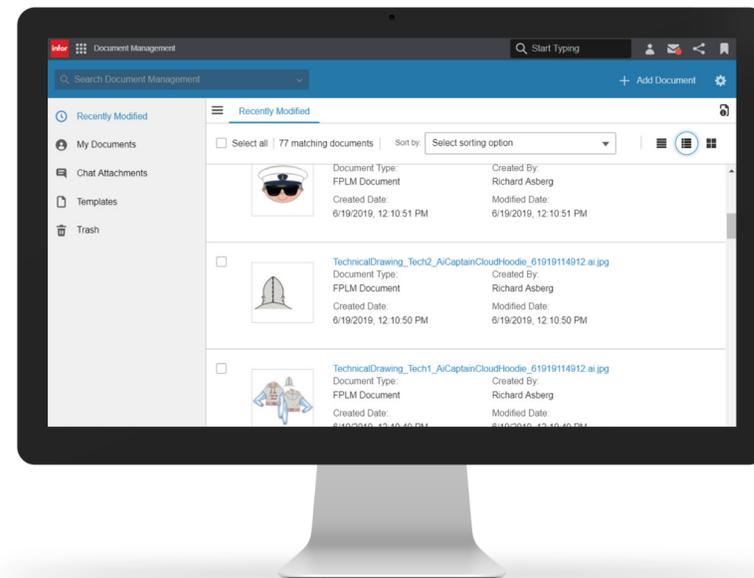

Create and edit styles

Your graphic designers, who live and breathe inside Adobe applications, won't lose their train of thought. Our bi-directional plugins now include an Adobe Illustrator plugin with secure access to PLM, and applicable development activities for styles, materials, and trims.

Adobe Illustrator plug-in

A plug-in for Adobe Illustrator enables the bi-directional exchange of data between Adobe Illustrator and Infor PLM for Fashion.
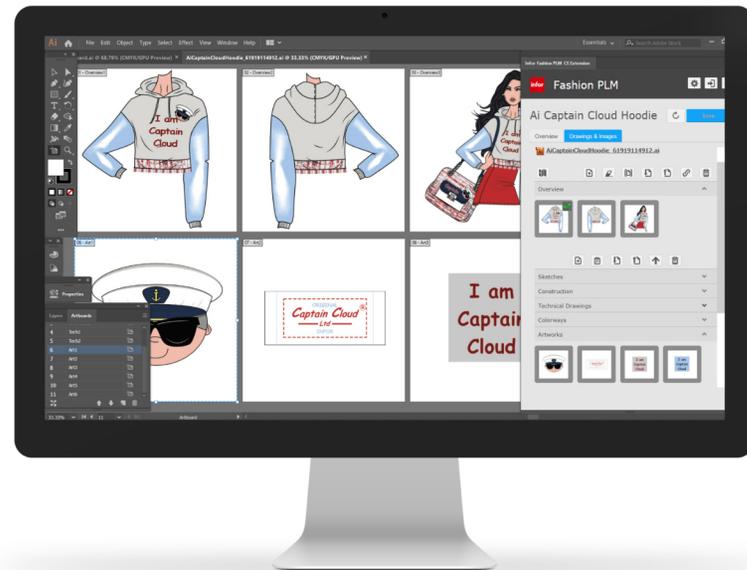

Protect brand integrity

Support for certain compliance and approval functions allows users to send requests for samples, cost quotations, lab-dips, and performance tests.

Compliance tools

Protect brand integrity with centralized, raw material, product, and supplier compliance standards to quickly capture and upload testing and audit information.
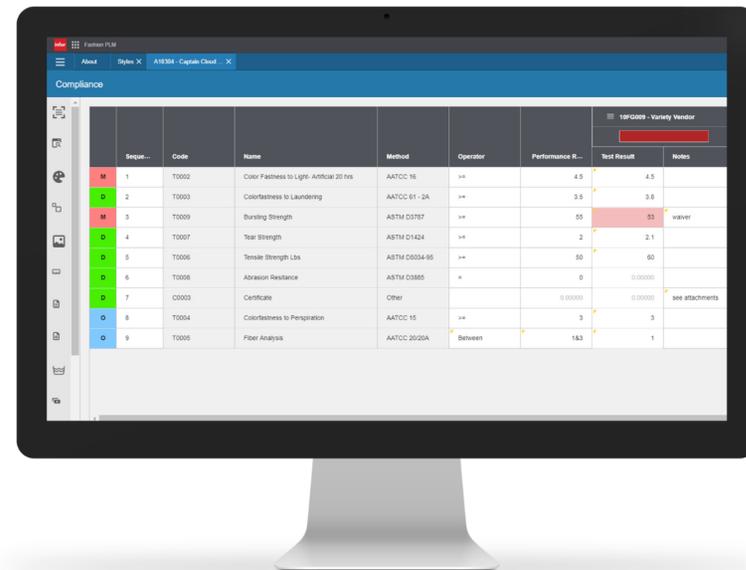

Create and edit critical path templates

Create and edit critical path templates that can be applied to styles for product development tracking, and track progress across all styles using each critical path. Task updates can be automated with Infor ION® workflows connected.

Critical path management

A critical path can be created for a season, collection, or group of products, with this flexible application. For the critical path, users define an end date and the system will automatically calculate the start and due dates of the activities within each milestone leg.
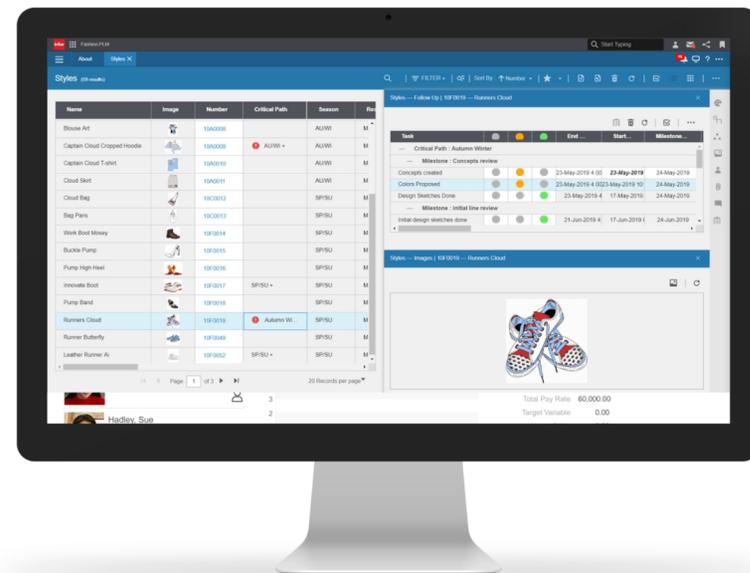

Upload multiple images at once

Upload images from external file folders on a network or stored locally, or re-use images/attachments from the built-in document library. Multiple images can be uploaded at once.

Material and trim development

Group components, fabrics, and trims into libraries for reuse, which can help leverage buying power. Each item can be created from scratch, copied, mass created, and mass updated.
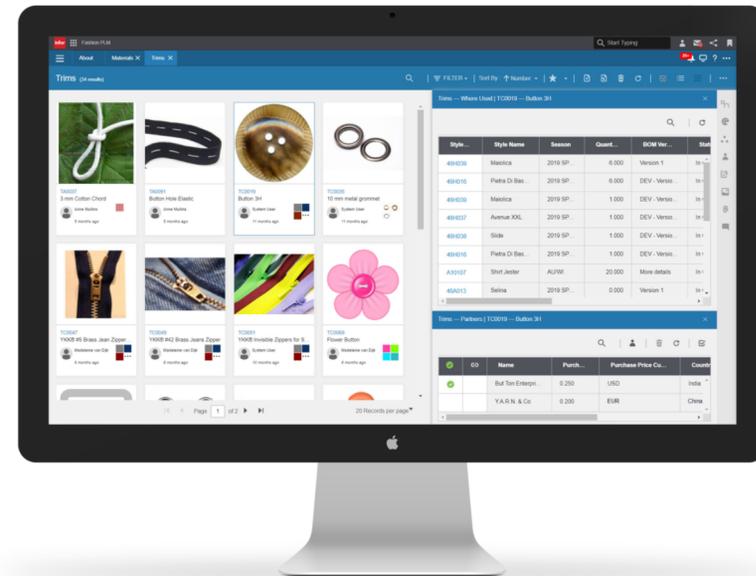

Eliminate manual data entry

Instead of starting from scratch on every new style, your team can use details and attributes from existing ones. Eliminate manual data entry every time something changes in your supply chain, and increase efficiency with "mass" creation, updating, deletion, and more.

Mass requests

Quickly create requests for product costings, sampling, lab dips, performance and compliance testing, and supplier audits with just a few mouse clicks—then track and update all requests in a central dashboard.
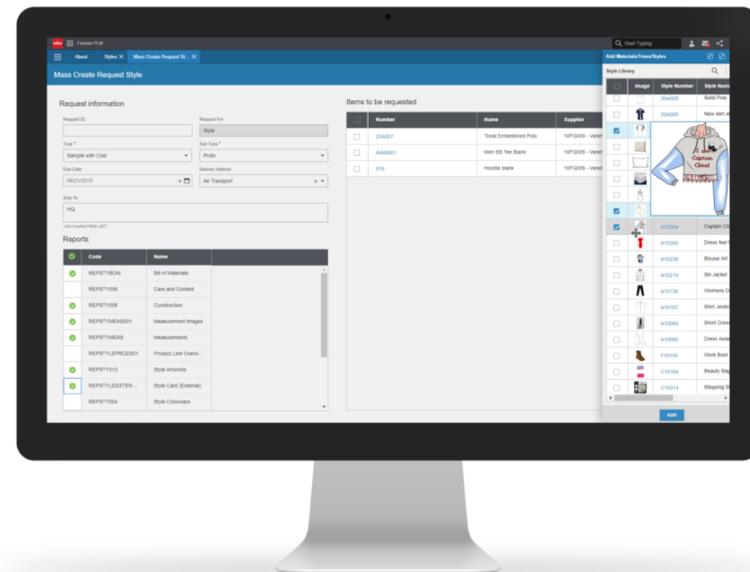

Control access to data

Work with role authorizations and views, general company settings, and hierarchies within the admin and settings menus.

Administration tools

Control access to data with authorizations that can be tailored according to a user's role, groups, and relationship with the business.
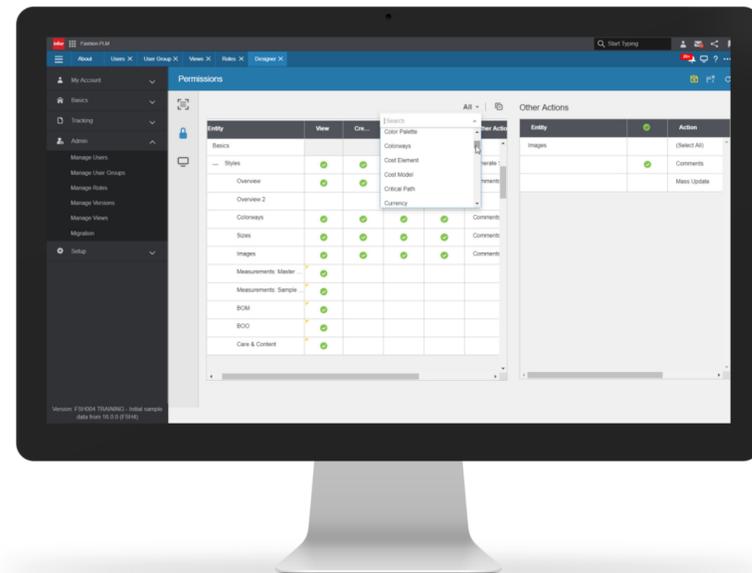

Make accurate decisions

Design, development, and manufacturing teams must be able to make accurate decisions on the fly. Infor PLM for Fashion efficiently integrates both Infor and third-party applications with smooth and seamless connectivity. The powerful and scalable framework helps eliminate operational silos, dramatically improve exception management, and achieve unparalleled end-to-end efficiency.

System integration

Incorporate Infor PLM for Fashion data into your ERP system and migrate existing data into the solution through Infor ION.

Other ERP and other systems
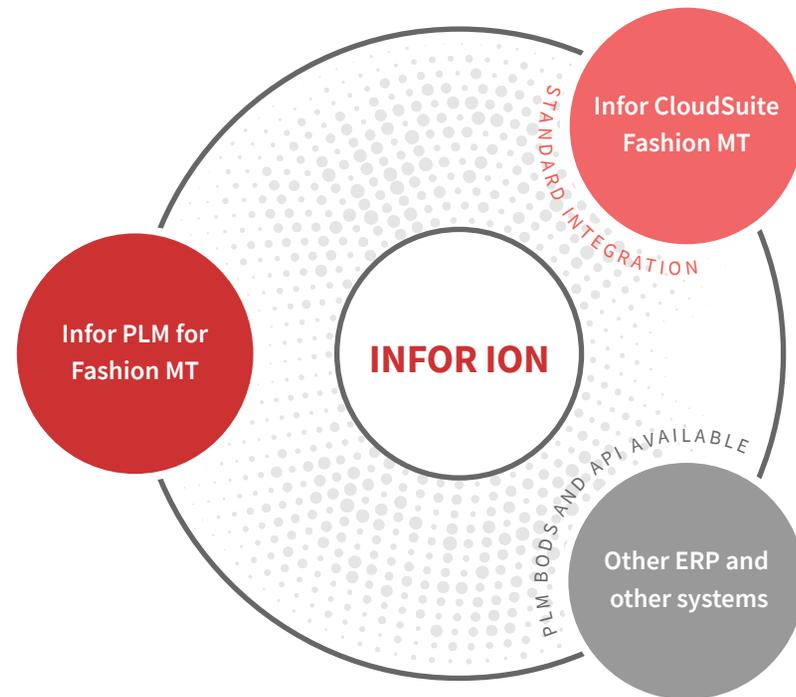

Collaborate wherever you are

Infor PLM for Fashion allows you to collaborate both internally and externally with partners around the globe. That way you can pass information on as soon as it becomes available to the people who need it, rather than only share information at specified points stipulated by a sequential model.

Partner collaboration

Share tech pack information and work more closely with selected suppliers on specifications and costs by leveraging the collaboration capabilities within Infor PLM for Fashion. All access is controlled through configurable permissions.
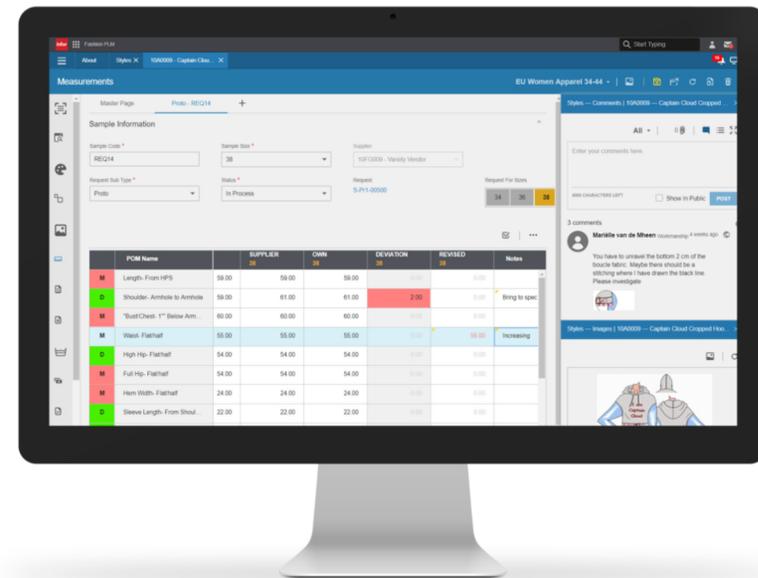

Create a unique experience—for every user

Being able to facilitate true collaboration across the business means giving your team members the ability to configure the software to their individual roles and personal references.

Excel-like functionality

With a list interface similar to that of Excel®, it's simple for first-time users to learn how to use Infor PLM for Fashion. With personalized homepages and beautiful design, Infor PLM for Fashion creates a superior experience for the whole team.
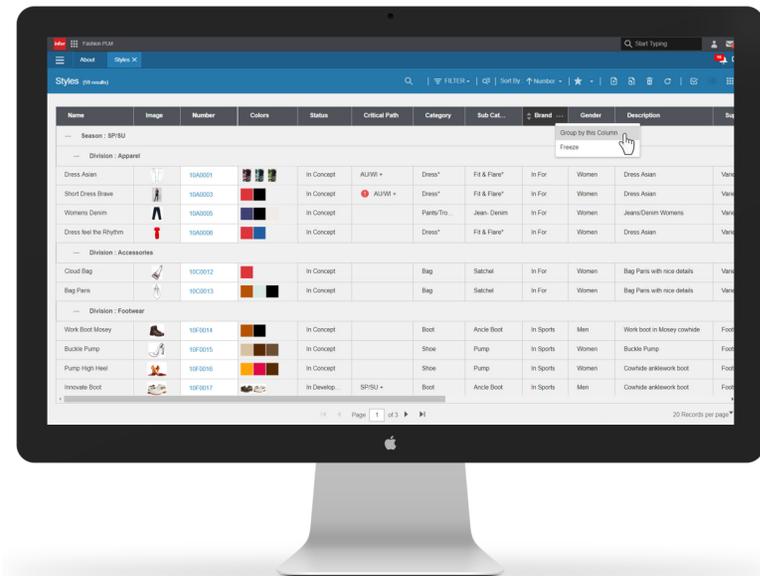

An elegant solution to suit any business

Easy to learn and simple to use, Infor PLM for Fashion provides a meaningful user experience that can inspire teams and enhance performance across the value chain.

- A modern platform keeps businesses ready for the future

- Standardized, streamlined processes and workflows

- Mobility to work anywhere, anytime on PC, Mac, tablet, or smartphone

- Plan new lines and execute styles in parallel

- Increase ratio of designs that make it into production

- Open for third-party integrations using Infor ION integration toolset with available business object documents (BODs) and REST APIs

- Powerful compliance capabilities increase brand protection

Infor PLM for Fashion is available in English, Spanish, Simplified Chinese, and French, with other languages planned.

Infor PLM for Fashion provides a full set of tools to consolidate operations and accelerate product innovation, every step of the way.
