

DAB Pumps moves forward with standardized cloud environment

Driving global manufacturing growth with unified operations

Overview

DAB Pumps fuels international growth and digital agility with Infor

Founded in Italy in 1975, DAB Pumps produces over 2 million motor-driven water pumps annually. As part of one of the world's leading groups in the water sector, DAB operates 6 manufacturing plants and distributes products across 150 countries. To support global growth ambitions, the company leverages a standardized, multi-tenant cloud core to unify worldwide operations.

Challenge

DAB needed to replace its aging legacy on-premises systems with a scalable cloud core to drive standardization and strengthen business continuity

Infor solution

Infor CloudSuite Industrial Enterprise reduces its reliance on customizations and ensures automatic updates

Outcome

DAB streamlines internal operations, boosts process visibility, and establishes an AI-ready core

Challenge

Eliminating operational silos and scaling without increasing headcount

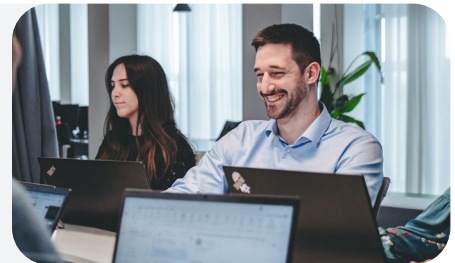

As DAB expanded across global markets, maintaining its legacy on-premises enterprise resource planning (ERP) systems became a barrier to digital innovation and local market compliance. Fragmented processes and manual spreadsheet workarounds made it difficult to scale seamlessly. An upcoming end-of-life date for the legacy ERP systems signaled an urgent need to modernize.

Operating in a hyper-competitive sector, DAB needed to differentiate itself through Internet of Things (IoT)-connected services, faster customer response times, and unified global supply chains. Its management set a clear strategic mandate: to grow its €415 million turnover, while maintaining its current headcount, by removing non-value-adding manual tasks. To achieve this, DAB needed to move away from heavy customization and establish standardized, enterprise-wide processes anchored by a modern, cloud-first technology roadmap.

“There are a lot of growth initiatives across the group. IT cannot be a barrier to those plans. We’re now able to better support the business.”

Stefano Dalla Grana

Head of IT
DAB Pumps

Infor solution

Building a single, scalable cloud core for multi-country rollouts

Working alongside partner Altea IN, DAB selected Infor CloudSuite™ Industrial Enterprise to transition already five of its production plants and global subsidiaries into a unified, multi-tenant cloud environment. By embracing a standard-first architecture on Infor™ OS, DAB reengineered its core processes—such as establishing a single logistics setup and adopting a single chart of accounts—before migrating.

“Changing technology doesn’t solve the problem. You need to start with how you want to work.”

Stefano Dalla Grana

Head of IT
DAB Pumps

The transition went live in January 2026 across key hubs, including Italy, Hungary, and France, establishing a repeatable rollout model for further expansion in Asia-Pacific and beyond. Built on Amazon Web Services® (AWS®), the cloud platform ensures continuous updates and cybersecurity resilience, while eliminating heavy local customization. DAB is also leveraging Infor Velocity Suite to embed artificial intelligence (AI), optical character recognition (OCR), and automated workflows directly into daily operational processes.

Outcome

Achieving standardized governance, operational speed, and an AI-ready foundation

Streamlines processes and cuts overhead

By switching to single-logistics transfer orders, DAB eliminated over 2 million internal transactions. Staff spend less time on manual entries and more on customer support.

“Today, we have more clarity. We’ve reduced much of the complexity, and we’re more integrated as a group.”

Stefano Dalla Grana
Head of IT
DAB Pumps

Drives unified visibility and performance

A centralized material requirements planning (MRP) system now runs across all manufacturing plants simultaneously, removing time-zone delays and providing clear, proactive visibility into operational bottlenecks.

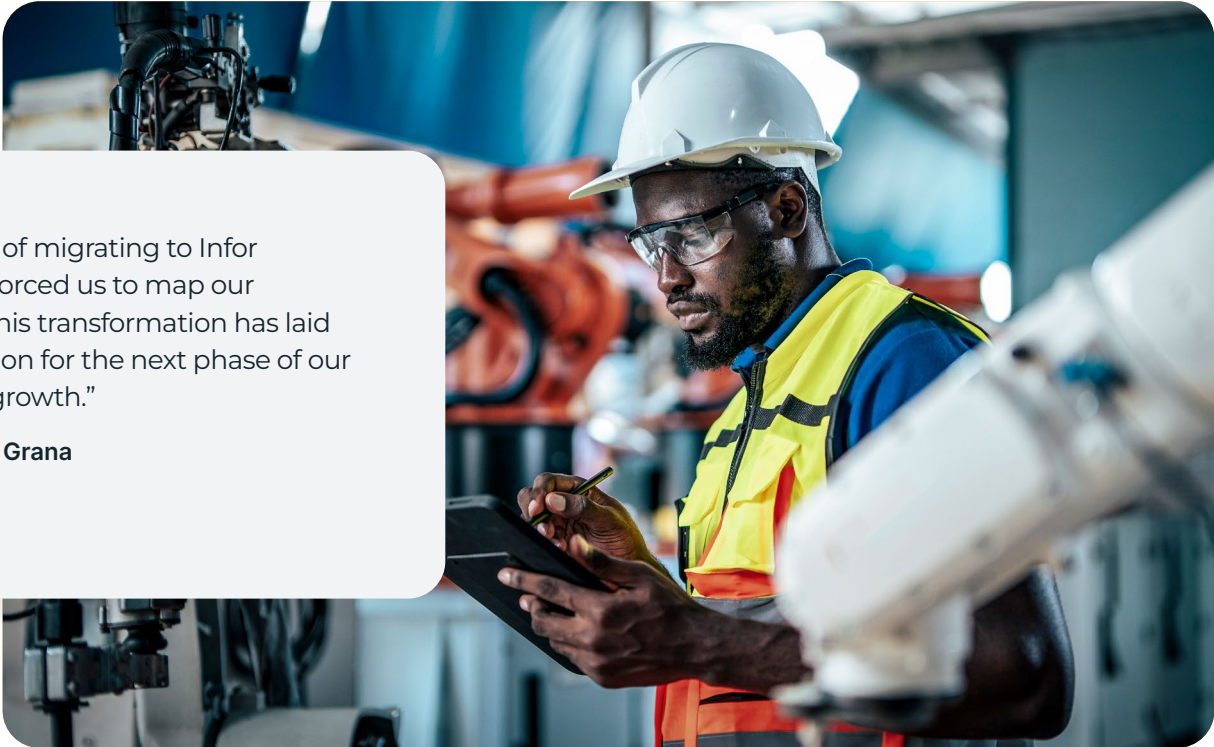

“The biggest impact is the visibility, the speed of information. If there is a problem now, we know where it is and how we can act. We are far more proactive.”

Stefano Dalla Grana
Head of IT
DAB Pumps

Prepares the business for future AI innovation

Operating on standard multi-tenant software unlocks continuous releases, enabling DAB to deploy Infor Velocity Suite's AI tools directly into daily logistics and fulfillment workflows.

"The process of migrating to Infor CloudSuite forced us to map our processes. This transformation has laid the foundation for the next phase of our company's growth."

Stefano Dalla Grana
Head of IT
DAB Pumps

About Infor

Infor is a global leader in business cloud software products for companies in industry-specific markets. Infor builds complete industry suites in the cloud and efficiently deploys technology that puts the user experience first, leverages data science, and integrates easily into existing systems. Over 67,000 organizations worldwide rely on Infor to help overcome market disruptions and achieve business-wide digital transformation.
