

Infor CloudSuite™ provides the right ingredients to grow your dairy business

As a manufacturer of dairy products, you must be forward thinking. Given the short shelf life of your primary ingredient, that means real-time visibility of the supply of raw milk—including its variable butterfat, protein, and other solids components—and statistically sound forecasts of what products you need to produce and where they are going.

What's in it for you

Improve milk yield

Minimize waste

Grow profitably

“ The benefits of the cloud simply cannot be ignored anymore. The cloud is faster, more flexible and reliable. Moreover, it takes a lot of management out of your hands and it is easy to adapt standards. It forms a strong basis for the future, in which data will play an increasingly important role in dairy production.”

Joris Aarts, CFO, Amalthea

The right ingredients for speed, agility, and business growth

Boost operational excellence:

With advanced scheduling, accurate planning of protein and fat contents, and catch weight and dehydration of cheese for accurate billing and costing.

Secure supply chain visibility and resilience:

Maximize yield by utilizing by-products from milk processing, minimize waste through shelf-life, expire and aging management, implement grower contracts and settlements based on received quality.

Enable product innovation:

With cross-functional product lifecycle management tools to help bring products to market faster and with accurate labeling.

Ensure food safety and compliance:

Using graphical track and trace tools, faster recall management, quality control, and compliance.

Facilitate profitable growth:

By leveraging Infor's multi-country/site/channel platform.

Infor CloudSuite Food & Beverage includes all the capabilities to manage the dairy lifecycle right out of the box. As a result, you can quickly adapt business processes to the rapid changes of the current dairy industry.
