Infor delivers multimodal capability in the cloud

Infor Transportation Management

Do business better

Whether you are a small business or a large multi-location enterprise, you will benefit from a flexible solution footprint that manages all your North American transportation planning, execution, and tracking needs. Infor® Transportation Management [TM] streamlines freight and shipping operations for a broad range of retail, distribution, and manufacturing-intensive companies. With Infor TM you can more easily plan, manage, and execute across multiple shipping modes, including truckload, LTL, rail, parcel, and intermodal.

Infor Transportation Management was initially developed to support the logistics center of excellence powering one of the top 3PLs in North America.

Key features

- Truckload, LTL, parcel, rail, and intermodal execution

- ERP order integration

- Rate shopping

- Planning
  - Accessorial Services
  - Commodity appointments

- Tender/Book
  - Carrier assignment
  - Auto route
  - Equipment planning

- Tracking
  - Shipment progress milestones
  - Real-time GPS, and maps
  - Shareable tracking links

- Freight invoice settlement

Infor makes transportation planning and management simpler

Take control of your freight spend

With soaring transportation costs, inflation, and the ongoing uncertainty of potential supply chain disruptions, it's more important than ever to better manage your freight spend.

With Infor TM you can:

- Secure the best rates with carriers
- Consolidate orders for better equipment utilization
- Develop and execute transportation plans
- Improve visibility from freight quote at order entry all the way to delivery

Components include:

Transportation Planning—carrier selection and order consolidation. You can group shipment orders based on origin and destination locations, consolidate them into loads, and determine the most appropriate way to move those loads based on constraints such as delivery dates and cost.

Transportation Management—shipment lifecycle automation. Streamline multimodal shipping processes and minimize spend and capacity needs by directing and automating the entire shipment lifecycle, from planning and execution to carrier settlement. Gain greater visibility and control of inventory in motion inbound and across your enterprise as well as the outbound customer fulfillment process. Optimize freight spend while selecting the right carrier service levels to improve the customer experience. Benefit from shipment planning for multiple modes, digital freight contracts and multimodal rate management, rate shopping and carrier selection, workflow-enabled settlement and freight payment, and reporting and analysis tools.

Gain visibility and control

Order Visibility—at the SKU/part level. View inventory in-transit at the stock keeping unit/part level on intra-facility transfers or self-managed inbound moves. With this level of visibility, you can close the gaps between sales, logistics, procurement, and customer fulfillment.

Event Management—real-time alerts. Profit from real-time, proactive exception management for your shipments. Monitor loads and tenders and respond quickly to exceptions, issues, or opportunities requiring immediate action. Send real-time alerts to downstream stakeholders so they can take appropriate actions to avoid disruption.

Workflow—business rule compliance and efficiency. Infor TM workflow supports logistical business rules throughout your enterprise while automating fragmented, labor-intensive, and error-prone manual steps.

Extend the power of visibility

Infor TM offers an optional solution to extend shipment visibility to non-logistics staff, supply chain partners or end customers with Infor TM Track. Take load monitoring and customer service to a new level of visual clarity with dynamic, self-serve tracking support. Any customer can track their own shipment progress online, without contacting your customer service or requiring log-in credentials to a tracking portal.

Measure and monitor your results

Working with the right transportation management system (TMS) to fit your business can lead to improved profitability, increased competitiveness, and the chance to grow without adding transportation headcount. If your existing TMS is not in sync with the needs of your business—lacking the right multimodal capabilities or strong two-way integration to your ERP, or requiring too many manual steps, in a hard-to-maintain legacy platform—now is the time to modernize your shipping technology.

Infor TM solutions leverage leading cloud architecture and SaaS design thinking, for outstanding performance at a low total cost of ownership. You'll enjoy non-disruptive product updates, ongoing enhancements, and a growing list of transportation and freight management options to meet your ever-changing supply chain needs as the industry evolves.

Compatibility

Align transportation operations with the rest of your business through Infor-managed and certified integrations between Infor TM and the latest industry-specific CloudSuite® featuring Infor M3, as well as our top-ranking Infor WMS.

Why choose Infor Transportation Management in the cloud?

- Shorten delivery times
- Improve customer satisfaction
- Increase profitability
- Gain real-time shipment visibility for you and your customers
- Adapt quickly to new transportation and shipping needs
- Increase revenue with more competitive freight options to offer new customers
