DATA SHEET

# Infor CloudSuite Automotive for tier suppliers

## The AI-powered platform to stay ahead of changes in the industry

Tier suppliers are under pressure to deliver more value at lower cost and with greater resilience. Electrification, software-defined vehicles, tighter original equipment manufacturer (OEM) requirements, supply chain volatility, and gaps in digital maturity are changing how automotive suppliers compete. Traditional enterprise resource planning (ERP) and business systems can no longer keep up.

Infor™ CloudSuite Automotive gives tier suppliers a modern, industry-specific platform to stay ahead of changes in the industry. With built-in automotive capabilities, scalable cloud operations, and artificial intelligence (AI)-driven innovation, they can respond faster to OEM changes, protect margin, improve execution, and grow with confidence.

"Infor CloudSuite Automotive gives us more agility in order to change as business around us changes."

Senior Director of IT

TITAN

## Scale faster and drive innovation

Infor CloudSuite™ Automotive is a multi-tenant cloud platform with automotive ERP at its core and support for secure third-party integration. Connecting financial and operational data in real time without complex integrations or customization, it gives manufacturers an intelligent foundation for adopting new ways of working and attracting the next generation of talent.

**Built on Amazon Web Services® (AWS®)** for reliable, secure, and scalable cloud operations backed by infrastructure, network services, and industry expertise.

**High scalability and availability** allow suppliers to adjust capacity as demand changes while minimizing single points of failure.

**Biannual product releases** deliver new capabilities so customers can keep innovating without lengthy upgrades or patches.

**Infor Industry Process Catalog** provides out-of-the-box, automotive-specific processes and supports process mining to uncover opportunities for greater efficiency.

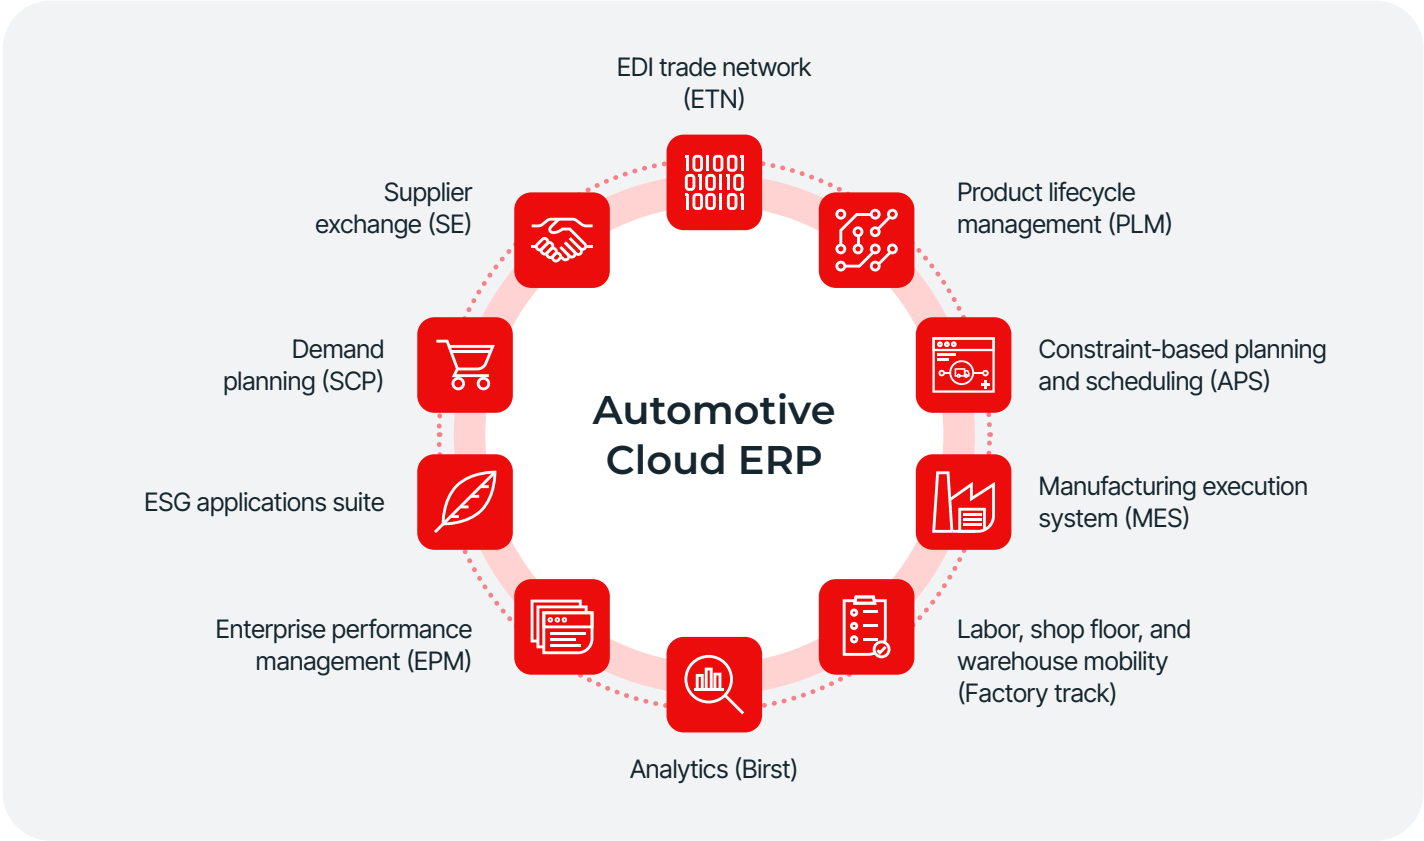

**Adaptive AI-driven user experience** tailored to each role and task, highlights what matters, automates routine work, and escalates only what needs human judgment.

**Infor Velocity Suite** pairs with every Infor CloudSuite as an all-inclusive AI package with industry-specific AI agents, generative AI (GenAI), process mining, and automation, supported by experts who help implement it.

## Built-in automotive capabilities

Infor CloudSuite Automotive is built on more than 30 years of automotive experience, bringing deep industry capabilities together on one integrated platform.

## Adapt to industry transformation and co-innovate with OEMs

Infor CloudSuite Automotive supports suppliers' manufacturing agility as product and customer mix shifts between traditional Internal Combustion Engine (ICE) parts and electric vehicle (EV)-specific components. Embedded product lifecycle management (PLM) connects engineering changes directly to production while an integrated quality management system (QMS) supports audit readiness and end-to-end traceability.

**Multi-mode manufacturing—**including repetitive, job shop, and project-based manufacturing—within a single environment.

**Embedded PLM** records the "as-designed," "as-built," and "as-maintained" bill of materials (BOMs), integrates tightly with ERP for shop-floor execution, and makes computer-aided design (CAD)-agnostic product data available to internal and external stakeholders.

**Integrated quality management** supports IATF 16949-aligned quality processes, Advanced Product Quality Planning (APQP) and Production Part Approval Process (PPAP) compliance, nonconformance management, corrective actions, and supplier quality.

## Strengthen the supply chain and stay compliant

Missed delivery dates and compliance gaps can quickly put OEM relationships, nominations, and profitability at risk. With Infor CloudSuite Automotive, suppliers align with OEM-specific standards, synchronize with demand schedules, and meet just-in-time (JIT) requirements. The result is stronger OEM collaboration, more reliable on-time, in-full delivery, and lower exposure to expedited costs, fines, or lost business.

**Automotive-specific electronic data interchange (EDI) layer** enables real-time connectivity, automation, and document exchange with more than 300 preconfigured trading partners.

**Single-planning engine** turns OEM releases into material, capacity, production, and distribution plans; finite-capacity scheduling reduces bottlenecks, expedited costs, and delivery risk.

**Contract management** captures OEM-specific logistics requirements and pricing changes at the line level, automatically updating billable lines to support accurate invoicing right the first time.

**Data and applications** reduce the complexity and cost of compliance to industry standards and regulations, such as IATF-16949, PPAP, governance, risk and compliance (GRC), and environmental, social, and governance (ESG).

## Protect margin with real-time visibility and control

Identifying revenue leakage, weighing investment decisions or improving sourcing decisions, Infor CloudSuite enables teams to make informed decisions that protect the bottom line.

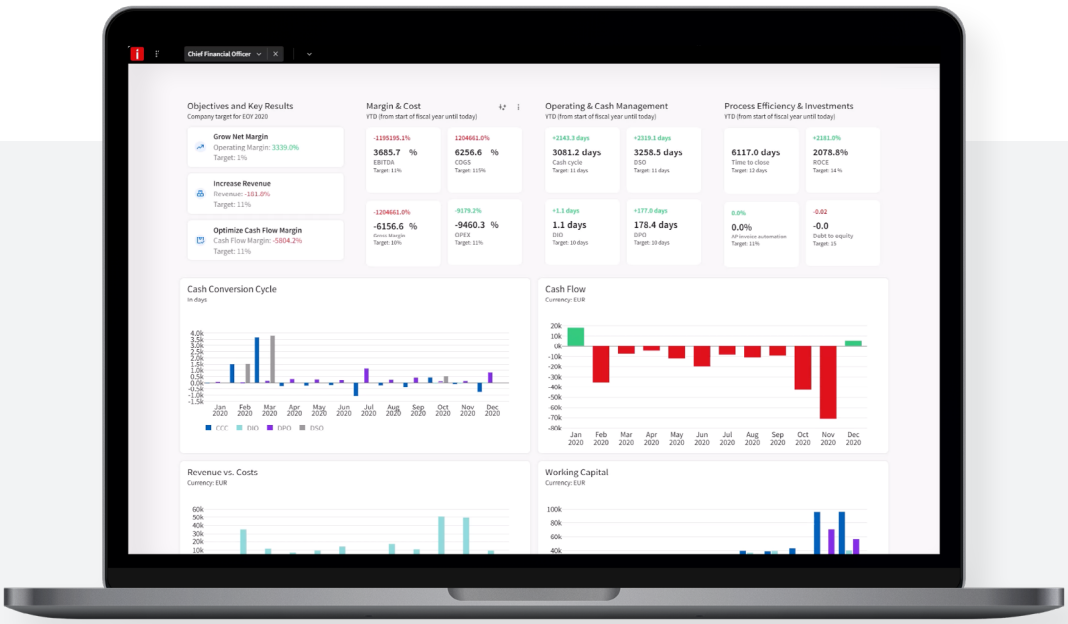

**Multi-site, multi-company architecture** supports plants, divisions, acquisitions, and diversification on one platform.

**Enterprise performance management** connects ERP actuals with budgeting, forecasting, and scenario planning of OEM volumes.

**Landed cost engine** captures true sourcing costs directly in procurement and receipt processes.

**Supplier key performance indicators (KPIs) and AI-driven operational expense (OpEx) analysis** surface trends, inventory issues, and cost leakage before they erode margin.

**AI-driven sales-contract fulfillment insights** flag consumption, fulfillment, and under-fulfillment risk early.

## Put governed industry AI to work now

Infor Industry AI™ brings enterprise AI with industry knowledge built into its architecture, applying governed intelligence to the context that runs the business: designs, release schedules, demand shifts, shop-floor traceability, supplier quality, and machine telemetry.

Infor Industry AI powers Infor Velocity Suite, an all-inclusive package with industry-specific AI agents, generative AI, process mining, automation, and expert implementation support. With one flat fee, suppliers can advance their AI journey and build value over time:

**Industry agents, out of the box:** Purpose-built for specific processes, roles, and workflows to take precise action, not just offer suggestions.

**Guided path to proven value:** A prescriptive, industry-specific approach that removes guesswork from AI adoption and supports compound value over time.

**Continuous co-innovation:** Forward-deployed engineers and implementation experts stay engaged throughout the journey, helping build and evolve solutions over time.

## Customer value delivered

**114% ROI**
in 12 months[1]

## Move faster, protect margin, and compete with confidence

For tier suppliers, becoming more agile, resilient, and future-ready requires more than just replacing legacy ERP. With Infor they get a clear path forward to the multi-tenant cloud transformation, intelligent automation, and industry AI that can be put to practical use, fast.

## About Infor

Infor is a global leader in business cloud software products for companies in industry-specific markets. Infor builds complete industry suites in the cloud and efficiently deploys technology that puts the user experience first, leverages data science, and integrates easily into existing systems. Over 67,000 organizations worldwide rely on Infor to help overcome market disruptions and achieve business-wide digital transformation.
